

Package: fecapi (via r-universe)

October 24, 2024

Title 'OpenFEC' 'API' Client

Version 0.0.0.9001

Description A client to interact with the 'OpenFEC' 'API' at <https://api.open.fec.gov/developers/>. The 'OpenFEC' 'API' provides programmatic access to campaign finance data stored by the Federal Election Commission.

 fec_call_api

 Call the OpenFEC API

Description

Generate and perform request to an OpenFEC endpoint.

Usage

```
fec_call_api(
  path,
  query = list(),
  body = NULL,
  method = NULL,
  pagination = c("none", "basic"),
  max_results = Inf,
  max_reqs = Inf,
  api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY"),
  call = rlang::caller_env()
)
```

Arguments

<code>path</code>	The route to an API endpoint. Optionally, a list or character vector with the path as one or more unnamed arguments (which will be concatenated with <code>"/"</code>) plus named arguments to <code>glue::glue()</code> into the path.
<code>query</code>	An optional list or character vector of parameters to pass in the query portion of the request. Can also include a <code>.multi</code> argument to pass to <code>httr2::req_url_query()</code> to control how elements containing multiple values are handled.
<code>body</code>	An object to use as the body of the request. If any component of the body is a path, pass it through <code>fs::path()</code> or otherwise give it the class <code>"fs_path"</code> to indicate that it is a path.
<code>method</code>	If the method is something other than GET or POST, supply it. Case is ignored.
<code>pagination</code>	The pagination scheme to use. Currently either <code>"none"</code> (the default) or <code>"basic"</code> (a scheme that uses <code>per_page</code> and returned <code>pages</code> information). If an endpoint has a <code>per_page</code> argument, use <code>"basic"</code> .
<code>max_results</code>	The maximum number of results to return. Note that slightly more results may be returned if <code>max_results</code> is not evenly divisible by 100.
<code>max_reqs</code>	The maximum number of separate requests to perform. Passed to the <code>max_reqs</code> argument of <code>httr2::req_perform_iterative()</code> when <code>next_req</code> is supplied. The default 2 should likely be changed to <code>Inf</code> after you validate the function.

<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.
<code>call</code>	The execution environment of a currently running function, e.g. <code>caller_env()</code> . The function will be mentioned in error messages as the source of the error. See the <code>call</code> argument of <code>abort()</code> for more information.

Value

A tibble with the results of the API call.

`fec_get_audit_case` *Get audit case*

Description

This endpoint contains Final Audit Reports approved by the Commission since inception. The search can be based on information about the audited committee (Name, FEC ID Number, Type, Election Cycle) or the issues covered in the report.

Usage

```
fec_get_audit_case(
  audit_case_id,
  cycle,
  sub_category_id,
  sort_nulls_last,
  sort_hide_null,
  min_election_cycle,
  audit_id,
  q,
  per_page,
  max_election_cycle,
  candidate_id,
  committee_type,
  qq,
  page,
  committee_id,
  committee_designation,
  primary_category_id,
  sort_null_only,
  sort,
  api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>audit_case_id</code>	Primary/foreign key for audit tables
<code>cycle</code>	Filter records to only those that are applicable to a given two-year period. This cycle follows the traditional House election cycle and subdivides the presidential and Senate elections into comparable two-year blocks. The cycle begins with an odd year and is named for its ending, even year.
<code>sub_category_id</code>	The finding id of an audit. Finding are a category of broader issues. Each category has an unique ID.
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>min_election_cycle</code>	Filter records to only those that are applicable to a given two-year period. This cycle follows the traditional House election cycle and subdivides the presidential and Senate elections into comparable two-year blocks. The cycle begins with an odd year and is named for its ending, even year.
<code>audit_id</code>	The audit issue. Each subcategory has an unique ID
<code>q</code>	The name of the committee. If a committee changes its name, the most recent name will be shown. Committee names are not unique. Use <code>committee_id</code> for looking up records.
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>max_election_cycle</code>	Filter records to only those that are applicable to a given two-year period. This cycle follows the traditional House election cycle and subdivides the presidential and Senate elections into comparable two-year blocks. The cycle begins with an odd year and is named for its ending, even year.
<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>committee_type</code>	The one-letter type code of the organization: - C communication cost - D delegate - E electioneering communication - H House - I independent expenditure filer (not a committee) - N PAC - nonqualified - O independent expenditure-only (super PACs) - P presidential - Q PAC - qualified - S Senate - U single candidate independent expenditure - V PAC with non-contribution account, nonqualified - W PAC with non-contribution account, qualified - X party, nonqualified - Y party, qualified - Z national party non-federal account
<code>qq</code>	Name of candidate running for office
<code>page</code>	For paginating through results, starting at page 1
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.

<code>committee_designation</code>	Type of committee: - H or S - Congressional - P - Presidential - X or Y or Z - Party - N or Q - PAC - I - Independent expenditure - O - Super PAC
<code>primary_category_id</code>	Audit category ID (table PK)
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>sort</code>	Provide a field to sort by. Use - for descending order. ex: <code>-case_no</code>
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

`fec_get_audit_category`
Get audit category

Description

This lists the options for the categories and subcategories available in the `/audit-search/` endpoint.

Usage

```
fec_get_audit_category(
    sort_nulls_last,
    page,
    primary_category_name,
    sort_hide_null,
    primary_category_id,
    sort_null_only,
    per_page,
    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>page</code>	For paginating through results, starting at page 1

<code>primary_category_name</code>	Primary Audit Category - No Findings or Issues/Not a Committee - Net Outstanding Campaign/Convention Expenditures/Obligations - Payments/Disgorgements - Allocation Issues - Prohibited Contributions - Disclosure - Recordkeeping - Repayment to US Treasury - Other - Misstatement of Financial Activity - Excessive Contributions - Failure to File Reports/Schedules/Notices - Loans - Referred Findings Not Listed
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>primary_category_id</code>	Audit category ID (table PK)
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

`fec_get_audit_primary_category`
Get audit primary category

Description

This lists the options for the primary categories available in the `/audit-search/` endpoint.

Usage

```
fec_get_audit_primary_category(
    sort_nulls_last,
    page,
    primary_category_name,
    sort_hide_null,
    primary_category_id,
    sort_null_only,
    per_page,
    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>page</code>	For paginating through results, starting at page 1
<code>primary_category_name</code>	Primary Audit Category - No Findings or Issues/Not a Committee - Net Outstanding Campaign/Convention Expenditures/Obligations - Payments/Disgorgements - Allocation Issues - Prohibited Contributions - Disclosure - Recordkeeping - Repayment to US Treasury - Other - Misstatement of Financial Activity - Excessive Contributions - Failure to File Reports/Schedules/Notices - Loans - Referred Findings Not Listed
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>primary_category_id</code>	Audit category ID (table PK)
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

`fec_get_calendar_dates`

Get calendar dates

Description

Combines the election and reporting dates with Commission meetings, conferences, outreach, Advisory Opinions, rules, litigation dates and other events into one calendar. State and report type filtering is no longer available.

Usage

```
fec_get_calendar_dates(
  sort_nulls_last,
  page,
  min_start_date,
  calendar_category_id,
  sort_hide_null,
  min_end_date,
```

```

    event_id,
    sort_null_only,
    per_page,
    description,
    sort,
    max_end_date,
    summary,
    max_start_date,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>page</code>	For paginating through results, starting at page 1
<code>min_start_date</code>	The minimum start date.(MM/DD/YYYY or YYYY-MM-DD)
<code>calendar_category_id</code>	Each type of event has a calendar category with an integer id. Options are: Open Meetings: 32, Executive Sessions: 39, Public Hearings: 40, Conferences: 33, Roundtables: 34, Election Dates: 36, Federal Holidays: 37, FEA Periods: 38, Commission Meetings: 20, Reporting Deadlines: 21, Conferences and Outreach: 22, AOs and Rules: 23, Other: 24, Quarterly: 25, Monthly: 26, Pre and Post-Elections: 27, EC Periods:28, and IE Periods: 29
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>min_end_date</code>	The minimum end date.(MM/DD/YYYY or YYYY-MM-DD)
<code>event_id</code>	An unique ID for an event. Useful for downloading a single event to your calendar. This ID is not a permanent, persistent ID.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>description</code>	Brief description of event
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>max_end_date</code>	The maximum end date.(MM/DD/YYYY or YYYY-MM-DD)
<code>summary</code>	Longer description of event
<code>max_start_date</code>	The maximum start date.(MM/DD/YYYY or YYYY-MM-DD)
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_calendar_dates_export
    Get calendar dates export
```

Description

Returns CSV or ICS for downloading directly into calendar applications like Google, Outlook or other applications. Combines the election and reporting dates with Commission meetings, conferences, outreach, Advisory Opinions, rules, litigation dates and other events into one calendar. State filtering now applies to elections, reports and reporting periods. Presidential pre-primary report due dates are not shown on even years. Filers generally opt to file monthly rather than submit over 50 pre-primary election reports. All reporting deadlines are available at /reporting-dates/ for reference. This is [the sql function](#) that creates the calendar.

Usage

```
fec_get_calendar_dates_export(
    renderer,
    sort_nulls_last,
    page,
    min_start_date,
    calendar_category_id,
    sort_hide_null,
    min_end_date,
    event_id,
    sort_null_only,
    per_page,
    description,
    sort,
    max_end_date,
    summary,
    max_start_date,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>renderer</code>	BKTODO: No description provided.
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>page</code>	For paginating through results, starting at page 1
<code>min_start_date</code>	The minimum start date.(MM/DD/YYYY or YYYY-MM-DD)
<code>calendar_category_id</code>	Each type of event has a calendar category with an integer id. Options are: Open Meetings: 32, Executive Sessions: 39, Public Hearings: 40,

	Conferences: 33, Roundtables: 34, Election Dates: 36, Federal Holidays: 37, FEA Periods: 38, Commission Meetings: 20, Reporting Deadlines: 21, Conferences and Outreach: 22, AOs and Rules: 23, Other: 24, Quarterly: 25, Monthly: 26, Pre and Post-Elections: 27, EC Periods:28, and IE Periods: 29
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>min_end_date</code>	The minimum end date.(MM/DD/YYYY or YYYY-MM-DD)
<code>event_id</code>	An unique ID for an event. Useful for downloading a single event to your calendar. This ID is not a permanent, persistent ID.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>description</code>	Brief description of event
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>max_end_date</code>	The maximum end date.(MM/DD/YYYY or YYYY-MM-DD)
<code>summary</code>	Longer description of event
<code>max_start_date</code>	The maximum start date.(MM/DD/YYYY or YYYY-MM-DD)
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

`fec_get_candidates` *Get candidates*

Description

Fetch basic information about candidates, and use parameters to filter results to the candidates you're looking for. Each result reflects a unique FEC candidate ID. That ID is particular to the candidate for a particular office sought. If a candidate runs for the same office multiple times, the ID stays the same. If the same person runs for another office — for example, a House candidate runs for a Senate office — that candidate will get a unique ID for each office.

Usage

```
fec_get_candidates(
  office = NULL,
  candidate_status = NULL,
  cycle = NULL,
  district = NULL,
```

```

year = NULL,
state = NULL,
name = NULL,
is_active_candidate = NULL,
federal_funds_flag = NULL,
candidate_id = NULL,
min_first_file_date = NULL,
has_raised_funds = NULL,
election_year = NULL,
incumbent_challenge = NULL,
max_first_file_date = NULL,
party = NULL,
sort = NULL,
sort_hide_null = NULL,
sort_null_only = NULL,
sort_nulls_last = NULL,
max_results = 100,
api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

office	Federal office candidate runs for: H, S or P
candidate_status	One-letter code explaining if the candidate is: - C present candidate - F future candidate - N not yet a candidate - P prior candidate
cycle	Two-year election cycle in which a candidate runs for office. Calculated from Form 2. The cycle begins with an odd year and is named for its ending, even year. This cycle follows the traditional house election cycle and subdivides the presidential and Senate elections into comparable two-year blocks. To retrieve data for the entire four years of a presidential term or six years of a senatorial term, you will need the <code>election_full</code> flag.
district	Two-digit US House district of the office the candidate is running for. Presidential, Senate and House at-large candidates will have District 00.
year	Retrieve records pertaining to a particular election year. The list of election years is based on a candidate filing a statement of candidacy (F2) for that year.
state	US state or territory where a candidate runs for office
name	Name of candidate running for office
is_active_candidate	Candidates who are actively seeking office. If no value is specified, all candidates are returned. When True is specified, only active candidates are returned. When False is specified, only inactive candidates are returned.
federal_funds_flag	A boolean that describes if a presidential candidate has accepted federal funds. The flag will be false for House and Senate candidates.

<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>min_first_file_date</code>	Selects all candidates whose first filing was received by the FEC after this date.
<code>has_raised_funds</code>	A boolean that describes if a candidate's committee has ever received any receipts for their campaign for this particular office. (Candidates have separate candidate IDs for each office.)
<code>election_year</code>	Year of election
<code>incumbent_challenge</code>	One-letter code ('I', 'C', 'O') explaining if the candidate is an incumbent, a challenger, or if the seat is open.
<code>max_first_file_date</code>	Selects all candidates whose first filing was received by the FEC before this date.
<code>party</code>	Three-letter code for the party affiliated with a candidate or committee. For example, DEM for Democratic Party and REP for Republican Party.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>max_results</code>	The maximum number of results to return. Note that slightly more results may be returned if <code>max_results</code> is not evenly divisible by 100.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

`fec_get_candidates_search`

Get candidates search

Description

Fetch basic information about candidates and their principal committees. Each result reflects a unique FEC candidate ID. That ID is assigned to the candidate for a particular office sought. If a candidate runs for the same office over time, that ID stays the same. If the same person runs for multiple offices — for example, a House candidate runs for a Senate office — that candidate will get a unique ID for each office. The candidate endpoints primarily use data from FEC registration [Form 1](#) for committee information and [Form 2](#) for candidate information.

Usage

```

fec_get_candidates_search(
  office,
  candidate_status,
  cycle,
  district,
  sort_nulls_last,
  sort_hide_null,
  year,
  state,
  name,
  is_active_candidate,
  q,
  federal_funds_flag,
  per_page,
  candidate_id,
  min_first_file_date,
  page,
  sort,
  has_raised_funds,
  election_year,
  incumbent_challenge,
  sort_null_only,
  max_first_file_date,
  party,
  api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

office	Federal office candidate runs for: H, S or P
candidate_status	One-letter code explaining if the candidate is: - C present candidate - F future candidate - N not yet a candidate - P prior candidate
cycle	Two-year election cycle in which a candidate runs for office. Calculated from Form 2. The cycle begins with an odd year and is named for its ending, even year. This cycle follows the traditional house election cycle and subdivides the presidential and Senate elections into comparable two-year blocks. To retrieve data for the entire four years of a presidential term or six years of a senatorial term, you will need the <code>election_full</code> flag.
district	Two-digit US House district of the office the candidate is running for. Presidential, Senate and House at-large candidates will have District 00.
sort_nulls_last	Toggle that sorts null values last
sort_hide_null	Hide null values on sorted column(s).

<code>year</code>	Retrieve records pertaining to a particular election year. The list of election years is based on a candidate filing a statement of candidacy (F2) for that year.
<code>state</code>	US state or territory where a candidate runs for office
<code>name</code>	Name (candidate or committee) to search for. Alias for 'q'.
<code>is_active_candidate</code>	Candidates who are actively seeking office. If no value is specified, all candidates are returned. When True is specified, only active candidates are returned. When False is specified, only inactive candidates are returned.
<code>q</code>	Name of candidate running for office
<code>federal_funds_flag</code>	A boolean that describes if a presidential candidate has accepted federal funds. The flag will be false for House and Senate candidates.
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>min_first_file_date</code>	Selects all candidates whose first filing was received by the FEC after this date.
<code>page</code>	For paginating through results, starting at page 1
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>has_raised_funds</code>	A boolean that describes if a candidate's committee has ever received any receipts for their campaign for this particular office. (Candidates have separate candidate IDs for each office.)
<code>election_year</code>	Year of election
<code>incumbent_challenge</code>	One-letter code ('I', 'C', 'O') explaining if the candidate is an incumbent, a challenger, or if the seat is open.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>max_first_file_date</code>	Selects all candidates whose first filing was received by the FEC before this date.
<code>party</code>	Three-letter code for the party affiliated with a candidate or committee. For example, DEM for Democratic Party and REP for Republican Party.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

`fec_get_candidates_totals`
Get candidates totals

Description

Aggregated candidate receipts and disbursements grouped by cycle.

Usage

```
fec_get_candidates_totals(  
    office,  
    min_receipts,  
    cycle,  
    district,  
    max_receipts,  
    sort_hide_null,  
    state,  
    max_debts_owed_by_committee,  
    sort_nulls_last,  
    min_debts_owed_by_committee,  
    is_active_candidate,  
    q,  
    federal_funds_flag,  
    per_page,  
    max_cash_on_hand_end_period,  
    max_disbursements,  
    candidate_id,  
    page,  
    has_raised_funds,  
    election_full,  
    election_year,  
    sort_null_only,  
    min_cash_on_hand_end_period,  
    sort,  
    party,  
    min_disbursements,  
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")  
)
```

Arguments

<code>office</code>	Federal office candidate runs for: H, S or P
<code>min_receipts</code>	Minimum aggregated receipts
<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.

<code>district</code>	District of candidate
<code>max_receipts</code>	Maximum aggregated receipts
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>state</code>	State of candidate
<code>max_debts_owed_by_committee</code>	Maximum debt
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>min_debts_owed_by_committee</code>	Minimum debt
<code>is_active_candidate</code>	Candidates who are actively seeking office. If no value is specified, all candidates are returned. When True is specified, only active candidates are returned. When False is specified, only inactive candidates are returned.
<code>q</code>	Name of candidate running for office
<code>federal_funds_flag</code>	A boolean that describes if a presidential candidate has accepted federal funds. The flag will be false for House and Senate candidates.
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>max_cash_on_hand_end_period</code>	Maximum cash on hand
<code>max_disbursements</code>	Maximum aggregated disbursements
<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>page</code>	For paginating through results, starting at page 1
<code>has_raised_funds</code>	A boolean that describes if a candidate's committee has ever received any receipts for their campaign for this particular office. (Candidates have separate candidate IDs for each office.)
<code>election_full</code>	True indicates that full election period of a candidate. False indicates that two year election cycle.
<code>election_year</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>min_cash_on_hand_end_period</code>	Minimum cash on hand
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>party</code>	Three-letter party code
<code>min_disbursements</code>	Minimum aggregated disbursements
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_candidates_totals_aggregates
    Get candidates totals aggregates
```

Description

Candidate total receipts and disbursements aggregated by `aggregate_by`.

Usage

```
fec_get_candidates_totals_aggregates(
    office,
    sort_nulls_last,
    district,
    state,
    min_election_cycle,
    sort_hide_null,
    is_active_candidate,
    per_page,
    max_election_cycle,
    aggregate_by,
    page,
    election_year,
    election_full,
    sort_null_only,
    sort,
    party,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>office</code>	Federal office candidate runs for: H, S or P
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>district</code>	Two-digit US House district of the office the candidate is running for. Presidential, Senate and House at-large candidates will have District 00.
<code>state</code>	US state or territory where a candidate runs for office
<code>min_election_cycle</code>	Filter records to only those that are applicable to a given two-year period. This cycle follows the traditional House election cycle and subdivides the presidential and Senate elections into comparable two-year blocks. The cycle begins with an odd year and is named for its ending, even year.

<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>is_active_candidate</code>	Candidates who are actively seeking office. If no value is specified, all candidates are returned. When True is specified, only active candidates are returned. When False is specified, only inactive candidates are returned.
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>max_election_cycle</code>	Filter records to only those that are applicable to a given two-year period. This cycle follows the traditional House election cycle and subdivides the presidential and Senate elections into comparable two-year blocks. The cycle begins with an odd year and is named for its ending, even year.
<code>aggregate_by</code>	Candidate totals aggregate_by (Chose one of dropdown options): - ' ' grouped by election year - office grouped by election year, by office - office-state grouped by election year, by office, by state - office-state-district grouped by election year, by office, by state, by district - office-party grouped by election year, by office, by party
<code>page</code>	For paginating through results, starting at page 1
<code>election_year</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>election_full</code>	True indicates that full election period of a candidate. False indicates that two year election cycle.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>sort</code>	Provide a field to sort by. Use - for descending order. ex: <code>-case_no</code>
<code>party</code>	Three-letter code for the party affiliated with a candidate or committee. For example, DEM for Democratic Party and REP for Republican Party.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

`fec_get_candidates_totals_by_office`
Get candidates totals by office

Description

Aggregated candidate receipts and disbursements grouped by office by cycle.

Usage

```

fec_get_candidates_totals_by_office(
    office,
    sort_nulls_last,
    page,
    min_election_cycle,
    sort_hide_null,
    election_year,
    election_full,
    is_active_candidate,
    sort_null_only,
    per_page,
    max_election_cycle,
    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

office Federal office candidate runs for: H, S or P

sort_nulls_last Toggle that sorts null values last

page For paginating through results, starting at page 1

min_election_cycle Filter records to only those that are applicable to a given two-year period. This cycle follows the traditional House election cycle and subdivides the presidential and Senate elections into comparable two-year blocks. The cycle begins with an odd year and is named for its ending, even year.

sort_hide_null Hide null values on sorted column(s).

election_year Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.

election_full **True** indicates that full election period of a candidate. **False** indicates that two year election cycle.

is_active_candidate Candidates who are actively seeking office. If no value is specified, all candidates are returned. When **True** is specified, only active candidates are returned. When **False** is specified, only inactive candidates are returned.

sort_null_only Toggle that filters out all rows having sort column that is non-null

per_page The number of results returned per page. Defaults to 20.

max_election_cycle Filter records to only those that are applicable to a given two-year period. This cycle follows the traditional House election cycle and subdivides the presidential and Senate elections into comparable two-year blocks. The cycle begins with an odd year and is named for its ending, even year.

<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

`fec_get_candidates_totals_by_office_by_party`
Get candidates totals by office by party

Description

Aggregated candidate receipts and disbursements grouped by office by party by cycle.

Usage

```
fec_get_candidates_totals_by_office_by_party(
  office,
  sort_nulls_last,
  page,
  sort_hide_null,
  election_year,
  election_full,
  is_active_candidate,
  sort_null_only,
  per_page,
  sort,
  api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>office</code>	Federal office candidate runs for: H, S or P
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>page</code>	For paginating through results, starting at page 1
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>election_year</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>election_full</code>	True indicates that full election period of a candidate. False indicates that two year election cycle.

<code>is_active_candidate</code>	Candidates who are actively seeking office. If no value is specified, all candidates are returned. When True is specified, only active candidates are returned. When False is specified, only inactive candidates are returned.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

`fec_get_candidate_candidate_id`
Get candidate candidate id

Description

This endpoint is useful for finding detailed information about a particular candidate. Use the `candidate_id` to find the most recent information about that candidate.

Usage

```
fec_get_candidate_candidate_id(
    office,
    candidate_status,
    cycle,
    sort_nulls_last,
    state,
    district,
    year,
    name,
    sort_hide_null,
    federal_funds_flag,
    per_page,
    page,
    sort,
    has_raised_funds,
    election_year,
    sort_null_only,
    incumbent_challenge,
    party,
    candidate_id,
    max_results = Inf,
```

```

    max_reqs = Inf,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

office Federal office candidate runs for: H, S or P

candidate_status One-letter code explaining if the candidate is: - C present candidate - F future candidate - N not yet a candidate - P prior candidate

cycle Two-year election cycle in which a candidate runs for office. Calculated from Form 2. The cycle begins with an odd year and is named for its ending, even year. This cycle follows the traditional house election cycle and subdivides the presidential and Senate elections into comparable two-year blocks. To retrieve data for the entire four years of a presidential term or six years of a senatorial term, you will need the `election_full` flag.

sort_nulls_last Toggle that sorts null values last

state US state or territory where a candidate runs for office

district Two-digit US House district of the office the candidate is running for. Presidential, Senate and House at-large candidates will have District 00.

year Retrieve records pertaining to a particular election year. The list of election years is based on a candidate filing a statement of candidacy (F2) for that year.

name Name (candidate or committee) to search for. Alias for 'q'.

sort_hide_null Hide null values on sorted column(s).

federal_funds_flag A boolean that describes if a presidential candidate has accepted federal funds. The flag will be false for House and Senate candidates.

per_page The number of results returned per page. Defaults to 20.

page For paginating through results, starting at page 1

sort Provide a field to sort by. Use - for descending order.

has_raised_funds A boolean that describes if a candidate's committee has ever received any receipts for their campaign for this particular office. (Candidates have separate candidate IDs for each office.)

election_year Year of election

sort_null_only Toggle that filters out all rows having sort column that is non-null

incumbent_challenge One-letter code ('I', 'C', 'O') explaining if the candidate is an incumbent, a challenger, or if the seat is open.

<code>party</code>	Three-letter code for the party affiliated with a candidate or committee. For example, DEM for Democratic Party and REP for Republican Party.
<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>max_results</code>	The maximum number of results to return. Note that slightly more results may be returned if <code>max_results</code> is not evenly divisible by 100.
<code>max_reqs</code>	The maximum number of separate requests to perform. Passed to the <code>max_reqs</code> argument of <code>httr2::req_perform_iterative()</code> when <code>next_req</code> is supplied. The default 2 should likely be changed to <code>Inf</code> after you validate the function.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_candidate_candidate_id_committees
  Get candidate candidate id committees
```

Description

This endpoint is useful for finding detailed information about a particular committee or filer. Use the `committee_id` to find the most recent information about the committee.

Usage

```
fec_get_candidate_candidate_id_committees(
  designation,
  committee_type,
  page,
  filing_frequency,
  cycle,
  sort_hide_null,
  year,
  sort_nulls_last,
  sort_null_only,
  per_page,
  organization_type,
  sort,
  candidate_id,
  api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

designation	The one-letter designation code of the organization: - A authorized by a candidate - J joint fundraising committee - P principal campaign committee of a candidate - U unauthorized - B lobbyist/registrant PAC - D leadership PAC
committee_type	The one-letter type code of the organization: - C communication cost - D delegate - E electioneering communication - H House - I independent expenditure filer (not a committee) - N PAC - nonqualified - O independent expenditure-only (super PACs) - P presidential - Q PAC - qualified - S Senate - U single candidate independent expenditure - V PAC with non-contribution account, nonqualified - W PAC with non-contribution account, qualified - X party, nonqualified - Y party, qualified - Z national party non-federal account
page	For paginating through results, starting at page 1
filing_frequency	The one-letter code of the filing frequency: - A Administratively terminated - D Debt - M Monthly filer - Q Quarterly filer - T Terminated - W Waived
cycle	A two year election cycle that the committee was active- (after original registration date but before expiration date in Form 1s) The cycle begins with an odd year and is named for its ending, even year.
sort_hide_null	Hide null values on sorted column(s).
year	A year that the committee was active— (after original registration date or filing but before expiration date)
sort_nulls_last	Toggle that sorts null values last
sort_null_only	Toggle that filters out all rows having sort column that is non-null
per_page	The number of results returned per page. Defaults to 20.
organization_type	The one-letter code for the kind for organization: - C corporation - L labor organization - M membership organization - T trade association - V cooperative - W corporation without capital stock
sort	Provide a field to sort by. Use - for descending order.
candidate_id	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
api_key	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_candidate_candidate_id_committees_history
    Get candidate candidate id committees history
```

Description

Explore a filer's characteristics over time. This can be particularly useful if the committees change treasurers, designation, or `committee_type`.

Usage

```
fec_get_candidate_candidate_id_committees_history(
    designation,
    sort_nulls_last,
    page,
    sort_hide_null,
    election_full,
    sort_null_only,

`fec_get_candidate_candidate_id_filings`
Get candidate candidate id filings

Description

All official records and reports filed by or delivered to the FEC. Note: because the filings data includes many records, counts for large result sets are approximate; you will want to page through the records until no records are returned.

Usage

```
fec_get_candidate_candidate_id_filings(
  office,
  file_number,
  form_category,
  cycle,
  district,
  document_type,
  sort_hide_null,
  state,
  amendment_indicator,
  sort_nulls_last,
  is_amended,
  filer_type,
  max_receipt_date,
  per_page,
  primary_general_indicator,
  request_type,
  report_year,
  form_type,
  committee_type,
  beginning_image_number,
  page,
```

```

    sort,
    min_receipt_date,
    sort_null_only,
    q_filer,
    report_type,
    party,
    most_recent,
    candidate_id,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

office	Federal office candidate runs for: H, S or P
file_number	Filing ID number
form_category	The forms filed are categorized based on the nature of the filing: - REPORT F3, F3X, F3P, F3L, F4, F5, F7, F13 - NOTICE F5, F24, F6, F9, F10, F11 - STATEMENT F1, F2 - OTHER F1M, F8, F99, F12, FRQ
cycle	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
district	Two-digit US House district of the office the candidate is running for. Presidential, Senate and House at-large candidates will have District 00.
document_type	The type of document for documents other than reports: - 2 24 Hour Contribution Notice - 4 48 Hour Contribution Notice - A Debt Settlement Statement - B Acknowledgment of Receipt of Debt Settlement Statement - C RFAI: Debt Settlement First Notice - D Commission Debt Settlement Review - E Commission Response TO Debt Settlement Request - F Administrative Termination - G Debt Settlement Plan Amendment - H Disavowal Notice - I Disavowal Response - J Conduit Report - K Termination Approval - L Repeat Non-Filer Notice - M Filing Frequency Change Notice - N Paper Amendment to Electronic Report - O Acknowledgment of Filing Frequency Change - S RFAI: Debt Settlement Second - T Miscellaneous Report TO FEC - V Repeat Violation Notice (441A OR 441B) - P Notice of Paper Filing - R F3L Filing Frequency Change Notice - Q Acknowledgment of F3L Filing Frequency Change - U Unregistered Committee Notice
sort_hide_null	Hide null values on sorted column(s).
state	US state or territory where a candidate runs for office
amendment_indicator	Amendment types: -N new -A amendment -T terminated -C consolidated -M multi-candidate -S secondary NULL might be new or amendment. If amendment indicator is null and the filings is the first or first in a chain treat it as if it was a new. If it is not the first or first in a chain then treat the filing as an amendment.

sort_nulls_last	Toggle that sorts null values last
is_amended	False indicates that a report is the most recent. True indicates that the report has been superseded by an amendment.
filer_type	The method used to file with the FEC, either electronic or on paper.
max_receipt_date	Selects all filings received before this date(MM/DD/YYYY or YYYY-MM-DD)
per_page	The number of results returned per page. Defaults to 20.
primary_general_indicator	Primary, general or special election indicator.
request_type	Requests for additional information (RFAIs) sent to filers. The request type is based on the type of document filed: - 1 Statement of Organization - 2 Report of Receipts and Expenditures (Form 3 and 3X) - 3 Second Notice - Reports - 4 Request for Additional Information - 5 Informational - Reports - 6 Second Notice - Statement of Organization - 7 Failure to File - 8 From Public Disclosure - 9 From Multi Candidate Status
report_year	Forms with coverage date - year from the coverage ending date. Forms without coverage date - year from the receipt date.
form_type	The form where the underlying data comes from, for example, Form 1 would appear as F1: - F1 Statement of Organization - F1M Notification of Multicandidate Status - F2 Statement of Candidacy - F3 Report of Receipts and Disbursements for an Authorized Committee - F3P Report of Receipts and Disbursements by an Authorized Committee of a Candidate for The Office of President or Vice President - F3L Report of Contributions Bundled by Lobbyists/Registrants and Lobbyist/Registrant PACs - F3X Report of Receipts and Disbursements for other than an Authorized Committee - F4 Report of Receipts and Disbursements for a Committee or Organization Supporting a Nomination Convention - F5 Report of Independent Expenditures Made and Contributions Received - F6 48 Hour Notice of Contributions/Loans Received - F7 Report of Communication Costs by Corporations and Membership Organizations - F8 Debt Settlement Plan - F9 24 Hour Notice of Disbursements for Electioneering Communications - F13 Report of Donations Accepted for Inaugural Committee - F99 Miscellaneous Text - FRQ Request for Additional Information
committee_type	The one-letter type code of the organization: - C communication cost - D delegate - E electioneering communication - H House - I independent expenditure filer (not a committee) - N PAC - nonqualified - O independent expenditure-only (super PACs) - P presidential - Q PAC - qualified - S Senate - U single candidate independent expenditure - V PAC with non-contribution account, nonqualified - W PAC with non-contribution account, qualified - X party, nonqualified - Y party, qualified - Z national party non-federal account
beginning_image_number	Unique identifier for the electronic or paper report. This number is used to construct PDF URLs to the original document.

<code>page</code>	For paginating through results, starting at page 1
<code>sort</code>	Provide a field to sort by. Use - for descending order. ex: <code>-case_no</code>
<code>min_receipt_date</code>	Selects all filings received after this date(MM/DD/YYYY or YYYY-MM-DD)
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>q_filer</code>	Keyword search for filer name or ID
<code>report_type</code>	Name of report where the underlying data comes from: - 10D Pre-Election - 10G Pre-General - 10P Pre-Primary - 10R Pre-Run-Off - 10S Pre-Special - 12C Pre-Convention - 12G Pre-General - 12P Pre-Primary - 12R Pre-Run-Off - 12S Pre-Special - 30D Post-Election - 30G Post-General - 30P Post-Primary - 30R Post-Run-Off - 30S Post-Special - 60D Post-Convention - M1 January Monthly - M10 October Monthly - M11 November Monthly - M12 December Monthly - M2 February Monthly - M3 March Monthly - M4 April Monthly - M5 May Monthly - M6 June Monthly - M7 July Monthly - M8 August Monthly - M9 September Monthly - MY Mid-Year Report - Q1 April Quarterly - Q2 July Quarterly - Q3 October Quarterly - TER Termination Report - YE Year-End - ADJ COMP ADJUST AMEND - CA COMPREHENSIVE AMEND - 90S Post Inaugural Supplement - 90D Post Inaugural - 48 48 Hour Notification - 24 24 Hour Notification - M7S July Monthly/Semi-Annual - MSA Monthly Semi-Annual (MY) - MYS Monthly Year End/Semi-Annual - Q2S July Quarterly/Semi-Annual - QSA Quarterly Semi-Annual (MY) - QYS Quarterly Year End/Semi-Annual - QYE Quarterly Semi-Annual (YE) - QMS Quarterly Mid-Year/ Semi-Annual - MSY Monthly Semi-Annual (YE)
<code>party</code>	Three-letter code for the party affiliated with a candidate or committee. For example, DEM for Democratic Party and REP for Republican Party.
<code>most_recent</code>	Report is either new or is the most-recently filed amendment
<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

fec_get_candidate_candidate_id_history
    Get candidate candidate id history
```

Description

Find out a candidate's characteristics over time. This is particularly useful if the candidate runs for the same office in different districts or you want to know more about a candidate's previous races. This information is organized by `candidate_id`, so it won't help you find a candidate who ran for different offices over time; candidates get a new ID for each office.

Usage

```
fec_get_candidate_candidate_id_history(
    sort_nulls_last,
    per_page,
    sort_null_only,
    sort_hide_null,
    sort,
    election_full,
    page,
    candidate_id,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>election_full</code>	<code>True</code> indicates that full election period of a candidate. <code>False</code> indicates that two year election cycle.
<code>page</code>	For paginating through results, starting at page 1
<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

```
fec_get_candidate_candidate_id_history_cycle
```

Get candidate candidate id history cycle

Description

Find out a candidate's characteristics over time. This is particularly useful if the candidate runs for the same office in different districts or you want to know more about a candidate's previous races. This information is organized by `candidate_id`, so it won't help you find a candidate who ran for different offices over time; candidates get a new ID for each office.

Usage

```
fec_get_candidate_candidate_id_history_cycle(
    sort_nulls_last,
    per_page,
    sort_null_only,
    sort_hide_null,
    sort,
    election_full,
    page,
    candidate_id,
    cycle,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>election_full</code>	<code>True</code> indicates that full election period of a candidate. <code>False</code> indicates that two year election cycle.
<code>page</code>	For paginating through results, starting at page 1
<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>cycle</code>	Two-year election cycle in which a candidate runs for office. Calculated from Form 2. The cycle begins with an odd year and is named for its ending, even year. This cycle follows the traditional house election cycle

and subdivides the presidential and Senate elections into comparable two-year blocks. To retrieve data for the entire four years of a presidential term or six years of a senatorial term, you will need the `election_full` flag.

`api_key` An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

`fec_get_candidate_candidate_id_totals`
Get candidate candidate id totals

Description

This endpoint provides information about a committee's Form 3, Form 3X, or Form 3P financial reports, which are aggregated by two-year period. We refer to two-year periods as a `cycle`. The cycle is named after the even-numbered year and includes the year before it. To obtain totals from 2013 and 2014, you would use 2014. In odd-numbered years, the current cycle is the next year — for example, in 2015, the current cycle is 2016. For presidential and Senate candidates, multiple two-year cycles exist between elections.

Usage

```
fec_get_candidate_candidate_id_totals(
  sort_nulls_last,
  cycle,
  page,
  sort_hide_null,
  election_full,
  sort_null_only,
  per_page,
  sort,
  candidate_id,
  api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

`sort_nulls_last` Toggle that sorts null values last

`cycle` Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.

`page` For paginating through results, starting at page 1

<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>election_full</code>	<code>True</code> indicates that full election period of a candidate. <code>False</code> indicates that two year election cycle.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

`fec_get_committees` *Get committees*

Description

Fetch basic information about committees and filers. Use parameters to filter for particular characteristics.

Usage

```
fec_get_committees(
    designation,
    max_first_f1_date,
    min_first_f1_date,
    cycle,
    filing_frequency,
    sort_nulls_last,
    sort_hide_null,
    year,
    state,
    sponsor_candidate_id,
    q,
    per_page,
    min_last_f1_date,
    candidate_id,
    committee_type,
    min_first_file_date,
    page,
```

```

    sort,
    committee_id,
    sort_null_only,
    max_last_f1_date,
    treasurer_name,
    organization_type,
    max_first_file_date,
    party,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

designation The one-letter designation code of the organization: - A authorized by a candidate - J joint fundraising committee - P principal campaign committee of a candidate - U unauthorized - B lobbyist/registrant PAC - D leadership PAC

max_first_f1_date Filter for committees whose first Form 1 was received on or before this date.

min_first_f1_date Filter for committees whose first Form 1 was received on or after this date.

cycle A two year election cycle that the committee was active- (after original registration date but before expiration date in Form 1s) The cycle begins with an odd year and is named for its ending, even year.

filing_frequency The one-letter code of the filing frequency: - A Administratively terminated - D Debt - M Monthly filer - Q Quarterly filer - T Terminated - W Waived

sort_nulls_last Toggle that sorts null values last

sort_hide_null Hide null values on sorted column(s).

year A year that the committee was active— (after original registration date or filing but before expiration date)

state US state or territory

sponsor_candidate_id A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office. This is a filter for Leadership PAC sponsor.

q The name of the committee. If a committee changes its name, the most recent name will be shown. Committee names are not unique. Use `committee_id` for looking up records.

per_page The number of results returned per page. Defaults to 20.

<code>min_last_f1_date</code>	Filter for committees whose latest Form 1 was received on or after this date.
<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>committee_type</code>	The one-letter type code of the organization: - C communication cost - D delegate - E electioneering communication - H House - I independent expenditure filer (not a committee) - N PAC - nonqualified - O independent expenditure-only (super PACs) - P presidential - Q PAC - qualified - S Senate - U single candidate independent expenditure - V PAC with non-contribution account, nonqualified - W PAC with non-contribution account, qualified - X party, nonqualified - Y party, qualified - Z national party non-federal account
<code>min_first_file_date</code>	Filter for committees whose first filing was received on or after this date.
<code>page</code>	For paginating through results, starting at page 1
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>max_last_f1_date</code>	Filter for committees whose latest Form 1 was received on or before this date.
<code>treasurer_name</code>	Name of the Committee's treasurer. If multiple treasurers for the committee, the most recent treasurer will be shown.
<code>organization_type</code>	The one-letter code for the kind for organization: - C corporation - L labor organization - M membership organization - T trade association - V cooperative - W corporation without capital stock
<code>max_first_file_date</code>	Filter for committees whose first filing was received on or before this date.
<code>party</code>	Three-letter code for the party affiliated with a candidate or committee. For example, DEM for Democratic Party and REP for Republican Party.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_committee_committee_id
    Get committee committee id
```

Description

This endpoint is useful for finding detailed information about a particular committee or filer. Use the `committee_id` to find the most recent information about the committee.

Usage

```
fec_get_committee_committee_id(
    designation,
    committee_type,
    page,
    filing_frequency,
    cycle,
    sort_hide_null,
    year,
    sort_nulls_last,
    sort_null_only,
    per_page,
    organization_type,
    sort,
    committee_id,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>designation</code>	The one-letter designation code of the organization: - A authorized by a candidate - J joint fundraising committee - P principal campaign committee of a candidate - U unauthorized - B lobbyist/registrant PAC - D leadership PAC
<code>committee_type</code>	The one-letter type code of the organization: - C communication cost - D delegate - E electioneering communication - H House - I independent expenditure filer (not a committee) - N PAC - nonqualified - O independent expenditure-only (super PACs) - P presidential - Q PAC - qualified - S Senate - U single candidate independent expenditure - V PAC with non-contribution account, nonqualified - W PAC with non-contribution account, qualified - X party, nonqualified - Y party, qualified - Z national party non-federal account
<code>page</code>	For paginating through results, starting at page 1
<code>filing_frequency</code>	The one-letter code of the filing frequency: - A Administratively terminated - D Debt - M Monthly filer - Q Quarterly filer - T Terminated - W Waived

<code>cycle</code>	A two year election cycle that the committee was active- (after original registration date but before expiration date in Form 1s) The cycle begins with an odd year and is named for its ending, even year.
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>year</code>	A year that the committee was active— (after original registration date or filing but before expiration date)
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>organization_type</code>	The one-letter code for the kind for organization: - C corporation - L labor organization - M membership organization - T trade association - V cooperative - W corporation without capital stock
<code>sort</code>	Provide a field to sort by. Use - for descending order.

```
fec_get_committee_committee_id_candidates
    Get committee committee id candidates
```

Description

This endpoint is useful for finding detailed information about a particular candidate. Use the `candidate_id` to find the most recent information about that candidate.

Usage

```
fec_get_committee_committee_id_candidates(
    office,
    candidate_status,
    cycle,
    sort_nulls_last,
    state,
    district,
```

```

    year,
    name,
    sort_hide_null,
    federal_funds_flag,
    per_page,
    page,
    sort,
    has_raised_funds,
    election_year,
    sort_null_only,
    incumbent_challenge,
    party,
    committee_id,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

<code>office</code>	Federal office candidate runs for: H, S or P
<code>candidate_status</code>	One-letter code explaining if the candidate is: - C present candidate - F future candidate - N not yet a candidate - P prior candidate
<code>cycle</code>	Two-year election cycle in which a candidate runs for office. Calculated from Form 2. The cycle begins with an odd year and is named for its ending, even year. This cycle follows the traditional house election cycle and subdivides the presidential and Senate elections into comparable two-year blocks. To retrieve data for the entire four years of a presidential term or six years of a senatorial term, you will need the <code>election_full</code> flag.
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>state</code>	US state or territory where a candidate runs for office
<code>district</code>	Two-digit US House district of the office the candidate is running for. Presidential, Senate and House at-large candidates will have District 00.
<code>year</code>	Retrieve records pertaining to a particular election year. The list of election years is based on a candidate filing a statement of candidacy (F2) for that year.
<code>name</code>	Name (candidate or committee) to search for. Alias for 'q'.
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>federal_funds_flag</code>	A boolean that describes if a presidential candidate has accepted federal funds. The flag will be false for House and Senate candidates.
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>page</code>	For paginating through results, starting at page 1
<code>sort</code>	Provide a field to sort by. Use - for descending order.

<code>has_raised_funds</code>	A boolean that describes if a candidate's committee has ever received any receipts for their campaign for this particular office. (Candidates have separate candidate IDs for each office.)
<code>election_year</code>	Year of election
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>incumbent_challenge</code>	One-letter code ('I', 'C', 'O') explaining if the candidate is an incumbent, a challenger, or if the seat is open.
<code>party</code>	Three-letter code for the party affiliated with a candidate or committee. For example, DEM for Democratic Party and REP for Republican Party.
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

`fec_get_committee_committee_id_filings`

Get committee committee id filings

Description

All official records and reports filed by or delivered to the FEC. Note: because the filings data includes many records, counts for large result sets are approximate; you will want to page through the records until no records are returned.

Usage

```

fec_get_committee_committee_id_filings(
  office,
  file_number,
  form_category,
  cycle,
  district,
  document_type,
  sort_hide_null,
  state,
  amendment_indicator,
  sort_nulls_last,
  is_amended,
  filer_type,
  max_receipt_date,
  per_page,
  primary_general_indicator,
  request_type,
  report_year,
  form_type,
  committee_type,
  beginning_image_number,
  page,
  sort,
  min_receipt_date,
  sort_null_only,
  q_filer,
  report_type,
  party,
  most_recent,
  committee_id,
  api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

office	Federal office candidate runs for: H, S or P
file_number	Filing ID number
form_category	The forms filed are categorized based on the nature of the filing: - REPORT F3, F3X, F3P, F3L, F4, F5, F7, F13 - NOTICE F5, F24, F6, F9, F10, F11 - STATEMENT F1, F2 - OTHER F1M, F8, F99, F12, FRQ
cycle	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
district	Two-digit US House district of the office the candidate is running for. Presidential, Senate and House at-large candidates will have District 00.

document_type The type of document for documents other than reports: - 2 24 Hour Contribution Notice - 4 48 Hour Contribution Notice - A Debt Settlement Statement - B Acknowledgment of Receipt of Debt Settlement Statement - C RFAI: Debt Settlement First Notice - D Commission Debt Settlement Review - E Commission Response TO Debt Settlement Request - F Administrative Termination - G Debt Settlement Plan Amendment - H Disavowal Notice - I Disavowal Response - J Conduit Report - K Termination Approval - L Repeat Non-Filer Notice - M Filing Frequency Change Notice - N Paper Amendment to Electronic Report - O Acknowledgment of Filing Frequency Change - S RFAI: Debt Settlement Second - T Miscellaneous Report TO FEC - V Repeat Violation Notice (441A OR 441B) - P Notice of Paper Filing - R F3L Filing Frequency Change Notice - Q Acknowledgment of F3L Filing Frequency Change - U Unregistered Committee Notice

sort_hide_null Hide null values on sorted column(s).

state US state or territory where a candidate runs for office

amendment_indicator Amendment types: -N new -A amendment -T terminated -C consolidated -M multi-candidate -S secondary NULL might be new or amendment. If amendment indicator is null and the filings is the first or first in a chain treat it as if it was a new. If it is not the first or first in a chain then treat the filing as an amendment.

sort_nulls_last Toggle that sorts null values last

is_amended False indicates that a report is the most recent. True indicates that the report has been superseded by an amendment.

filer_type The method used to file with the FEC, either electronic or on paper.

max_receipt_date Selects all filings received before this date(MM/DD/YYYY or YYYY-MM-DD)

per_page The number of results returned per page. Defaults to 20.

primary_general_indicator Primary, general or special election indicator.

request_type Requests for additional information (RFAs) sent to filers. The request type is based on the type of document filed: - 1 Statement of Organization - 2 Report of Receipts and Expenditures (Form 3 and 3X) - 3 Second Notice - Reports - 4 Request for Additional Information - 5 Informational - Reports - 6 Second Notice - Statement of Organization - 7 Failure to File - 8 From Public Disclosure - 9 From Multi Candidate Status

report_year Forms with coverage date - year from the coverage ending date. Forms without coverage date - year from the receipt date.

form_type The form where the underlying data comes from, for example, Form 1 would appear as F1: - F1 Statement of Organization - F1M Notification of Multicandidate Status - F2 Statement of Candidacy - F3 Report of Receipts and Disbursements for an Authorized Committee - F3P Report of

Receipts and Disbursements by an Authorized Committee of a Candidate for The Office of President or Vice President - F3L Report of Contributions Bundled by Lobbyists/Registrants and Lobbyist/Registrant PACs - F3X Report of Receipts and Disbursements for other than an Authorized Committee - F4 Report of Receipts and Disbursements for a Committee or Organization Supporting a Nomination Convention - F5 Report of Independent Expenditures Made and Contributions Received - F6 48 Hour Notice of Contributions/Loans Received - F7 Report of Communication Costs by Corporations and Membership Organizations - F8 Debt Settlement Plan - F9 24 Hour Notice of Disbursements for Electioneering Communications - F13 Report of Donations Accepted for Inaugural Committee - F99 Miscellaneous Text - FRQ Request for Additional Information

committee_type

The one-letter type code of the organization: - C communication cost - D delegate - E electioneering communication - H House - I independent expenditure filer (not a committee) - N PAC - nonqualified - O independent expenditure-only (super PACs) - P presidential - Q PAC - qualified - S Senate - U single candidate independent expenditure - V PAC with non-contribution account, nonqualified - W PAC with non-contribution account, qualified - X party, nonqualified - Y party, qualified - Z national party non-federal account

beginning_image_number

Unique identifier for the electronic or paper report. This number is used to construct PDF URLs to the original document.

page

For paginating through results, starting at page 1

sort

Provide a field to sort by. Use - for descending order. ex: `-case_no`

min_receipt_date

Selects all filings received after this date(MM/DD/YYYY or YYYY-MM-DD)

sort_null_only

Toggle that filters out all rows having sort column that is non-null

q_filer

Keyword search for filer name or ID

report_type

Name of report where the underlying data comes from: - 10D Pre-Election - 10G Pre-General - 10P Pre-Primary - 10R Pre-Run-Off - 10S Pre-Special - 12C Pre-Convention - 12G Pre-General - 12P Pre-Primary - 12R Pre-Run-Off - 12S Pre-Special - 30D Post-Election - 30G Post-General - 30P Post-Primary - 30R Post-Run-Off - 30S Post-Special - 60D Post-Convention - M1 January Monthly - M10 October Monthly - M11 November Monthly - M12 December Monthly - M2 February Monthly - M3 March Monthly - M4 April Monthly - M5 May Monthly - M6 June Monthly - M7 July Monthly - M8 August Monthly - M9 September Monthly - MY Mid-Year Report - Q1 April Quarterly - Q2 July Quarterly - Q3 October Quarterly - TER Termination Report - YE Year-End - ADJ COMP ADJUST AMEND - CA COMPREHENSIVE AMEND - 90S Post Inaugural Supplement - 90D Post Inaugural - 48 48 Hour Notification - 24 24 Hour Notification - M7S July Monthly/Semi-Annual - MSA

	Monthly Semi-Annual (MY) - MYS Monthly Year End/Semi-Annual - Q2S July Quarterly/Semi-Annual - QSA Quarterly Semi-Annual (MY) - QYS Quarterly Year End/Semi-Annual - QYE Quarterly Semi-Annual (YE) - QMS Quarterly Mid-Year/ Semi-Annual - MSY Monthly Semi-Annual (YE)
party	Three-letter code for the party affiliated with a candidate or committee. For example, DEM for Democratic Party and REP for Republican Party.
most_recent	Report is either new or is the most-recently filed amendment
committee_id	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
api_key	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_committee_committee_id_history
    Get committee committee id history
```

Description

Explore a filer's characteristics over time. This can be particularly useful if the committees change treasurers, designation, or `committee_type`.

Usage

```
fec_get_committee_committee_id_history(
    designation,
    sort_nulls_last,
    page,
    sort_hide_null,
    election_full,
    sort_null_only,
    per_page,
    sort,
    committee_id,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>designation</code>	The one-letter designation code of the organization: - A authorized by a candidate - J joint fundraising committee - P principal campaign committee of a candidate - U unauthorized - B lobbyist/registrant PAC - D leadership PAC
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>page</code>	For paginating through results, starting at page 1
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>election_full</code>	<code>True</code> indicates that full election period of a candidate. <code>False</code> indicates that two year election cycle.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_committee_committee_id_history_cycle
```

Get committee committee id history cycle

Description

Explore a filer's characteristics over time. This can be particularly useful if the committees change treasurers, designation, or `committee_type`.

Usage

```
fec_get_committee_committee_id_history_cycle(
    designation,
    sort_nulls_last,
    page,
    sort_hide_null,
    election_full,
    sort_null_only,
```

```

    per_page,
    sort,
    committee_id,
    cycle,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

designation The one-letter designation code of the organization: - A authorized by a candidate - J joint fundraising committee - P principal campaign committee of a candidate - U unauthorized - B lobbyist/registrant PAC - D leadership PAC

sort_nulls_last Toggle that sorts null values last

page For paginating through results, starting at page 1

sort_hide_null Hide null values on sorted column(s).

election_full True indicates that full election period of a candidate. False indicates that two year election cycle.

sort_null_only Toggle that filters out all rows having sort column that is non-null

per_page The number of results returned per page. Defaults to 20.

sort Provide a field to sort by. Use - for descending order.

committee_id A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.

cycle A two year election cycle that the committee was active- (after original registration date but before expiration date in Form 1s) The cycle begins with an odd year and is named for its ending, even year.

api_key An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

fec_get_committee_committee_id_reports

Get committee committee id reports

Description

Each report represents the summary information from Form 3, Form 3X and Form 3P. These reports have key statistics that illuminate the financial status of a given committee. Things like cash on hand, debts owed by committee, total receipts, and total disbursements are especially helpful for understanding a committee's financial dealings. By default, this endpoint includes both amended and final versions of each report. To restrict to only the final versions of each report, use `is_amended=false`; to retrieve only reports that have been amended, use `is_amended=true`. Several different reporting structures exist, depending on the type of organization that submits financial information. To see an example of these reporting requirements, look at the summary and detailed summary pages of Form 3, Form 3X, and Form 3P. **DISCLAIMER:** The field labels contained within this resource are subject to change. We are attempting to succinctly label these fields while conveying clear meaning to ensure accessibility for all users.

Usage

```
fec_get_committee_committee_id_reports(  
  min_debts_owed_amount,  
  max_disbursements_amount,  
  max_total_contributions,  
  max_debts_owed_expenditures,  
  cycle,  
  sort_nulls_last,  
  sort_hide_null,  
  year,  
  max_receipts_amount,  
  max_cash_on_hand_end_period_amount,  
  is_amended,  
  min_disbursements_amount,  
  max_party_coordinated_expenditures,  
  per_page,  
  max_independent_expenditures,  
  min_receipts_amount,  
  min_party_coordinated_expenditures,  
  candidate_id,  
  beginning_image_number,  
  page,  
  type,  
  sort,  
  min_total_contributions,  
  min_cash_on_hand_end_period_amount,  
  sort_null_only,  
  min_independent_expenditures,  
  report_type,  
  committee_id,  
  api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")  
)
```

Arguments

<code>min_debts_owed_amount</code>	Filter for all amounts greater than a value.
<code>max_disbursements_amount</code>	Filter for all amounts less than a value.
<code>max_total_contributions</code>	Filter for all amounts less than a value.
<code>max_debts_owed_expenditures</code>	Filter for all amounts less than a value.
<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>year</code>	Forms with coverage date - year from the coverage ending date. Forms without coverage date - year from the receipt date.
<code>max_receipts_amount</code>	Filter for all amounts less than a value.
<code>max_cash_on_hand_end_period_amount</code>	Filter for all amounts less than a value.
<code>is_amended</code>	False indicates that a report is the most recent. True indicates that the report has been superseded by an amendment.
<code>min_disbursements_amount</code>	Filter for all amounts greater than a value.
<code>max_party_coordinated_expenditures</code>	Filter for all amounts less than a value.
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>max_independent_expenditures</code>	Filter for all amounts less than a value.
<code>min_receipts_amount</code>	Filter for all amounts greater than a value.
<code>min_party_coordinated_expenditures</code>	Filter for all amounts greater than a value.
<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>beginning_image_number</code>	Unique identifier for the electronic or paper report. This number is used to construct PDF URLs to the original document.
<code>page</code>	For paginating through results, starting at page 1
<code>type</code>	The one-letter type code of the organization: - C communication cost - D delegate - E electioneering communication - H House - I independent

expenditure filer (not a committee) - N PAC - nonqualified - O independent expenditure-only (super PACs) - P presidential - Q PAC - qualified - S Senate - U single candidate independent expenditure - V PAC with non-contribution account, nonqualified - W PAC with non-contribution account, qualified - X party, nonqualified - Y party, qualified - Z national party non-federal account

sort Provide a field to sort by. Use - for descending order. ex: `-case_no`

min_total_contributions Filter for all amounts greater than a value.

min_cash_on_hand_end_period_amount Filter for all amounts greater than a value.

sort_null_only Toggle that filters out all rows having sort column that is non-null

min_independent_expenditures Filter for all amounts greater than a value.

report_type Report type; prefix with "-" to exclude. Name of report where the underlying data comes from: - 10D Pre-Election - 10G Pre-General - 10P Pre-Primary - 10R Pre-Run-Off - 10S Pre-Special - 12C Pre-Convention - 12G Pre-General - 12P Pre-Primary - 12R Pre-Run-Off - 12S Pre-Special - 30D Post-Election - 30G Post-General - 30P Post-Primary - 30R Post-Run-Off - 30S Post-Special - 60D Post-Convention - M1 January Monthly - M10 October Monthly - M11 November Monthly - M12 December Monthly - M2 February Monthly - M3 March Monthly - M4 April Monthly - M5 May Monthly - M6 June Monthly - M7 July Monthly - M8 August Monthly - M9 September Monthly - MY Mid-Year Report - Q1 April Quarterly - Q2 July Quarterly - Q3 October Quarterly - TER Termination Report - YE Year-End - ADJ COMP ADJUST AMEND - CA COMPREHENSIVE AMEND

committee_id A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.

api_key An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

`fec_get_committee_committee_id_totals`

Get committee committee id totals

Description

This endpoint provides information about a committee's Form 3, Form 3X, or Form 3P financial reports, which are aggregated by two-year period. We refer to two-year periods as a **cycle**. The cycle is named after the even-numbered year and includes the year before it. To obtain totals from 2013 and 2014, you would use 2014. In odd-numbered years, the current cycle is the next year — for example, in 2015, the current cycle is 2016. For presidential and Senate candidates, multiple two-year cycles exist between elections.

Usage

```
fec_get_committee_committee_id_totals(
  cycle,
  sort_nulls_last,
  per_page,
  sort_null_only,
  sort_hide_null,
  sort,
  page,
  committee_id,
  api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>page</code>	For paginating through results, starting at page 1
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_communication_costs
    Get communication costs
```

Description

52 U.S.C. 30118 allows "communications by a corporation to its stockholders and executive or administrative personnel and their families or by a labor organization to its members and their families on any subject," including the express advocacy of the election or defeat of any Federal candidate. The costs of such communications must be reported to the Federal Election Commission under certain circumstances.

Usage

```
fec_get_communication_costs(
    max_amount,
    max_image_number,
    sort_nulls_last,
    support_oppose_indicator,
    sort_hide_null,
    line_number,
    per_page,
    candidate_id,
    page,
    min_date,
    committee_id,
    min_amount,
    min_image_number,
    sort_null_only,
    image_number,
    sort,
    max_date,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>max_amount</code>	Filter for all amounts less than a value.
<code>max_image_number</code>	Maxium image number of the page where the schedule item is reported
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>support_oppose_indicator</code>	Support or opposition
<code>sort_hide_null</code>	Hide null values on sorted column(s).

<code>line_number</code>	Filter for form and line number using the following format: FORM-LINENUMBER. For example an argument such as F3X-16 would filter down to all entries from form F3X line number 16.
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>page</code>	For paginating through results, starting at page 1
<code>min_date</code>	Minimum date
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>min_amount</code>	Filter for all amounts greater than a value.
<code>min_image_number</code>	Minimum image number of the page where the schedule item is reported
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>image_number</code>	An unique identifier for each page where the electronic or paper filing is reported.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>max_date</code>	Maximum date
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_communication_costs_aggregates
    Get communication costs aggregates
```

Description

Communication cost aggregated by candidate ID and committee ID.

Usage

```
fec_get_communication_costs_aggregates(
    candidate_id,
    page,
    cycle,
    support_oppose_indicator,
    sort_hide_null,
```

```

    sort_nulls_last,
    committee_id,
    sort_null_only,
    per_page,
    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>page</code>	For paginating through results, starting at page 1
<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>support_oppose_indicator</code>	Support or opposition
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```

fec_get_communication_costs_by_candidate
  Get communication costs by candidate

```

Description

Communication cost aggregated by candidate ID and committee ID.

Usage

```

fec_get_communication_costs_by_candidate(
    office,
    candidate_id,
    cycle,
    district,
    state,
    page,
    support_oppose,
    election_full,
    sort_hide_null,
    sort_nulls_last,
    sort_null_only,
    per_page,
    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

<code>office</code>	Federal office candidate runs for: H, S or P
<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>district</code>	Two-digit US House district of the office the candidate is running for. Presidential, Senate and House at-large candidates will have District 00.
<code>state</code>	US state or territory where a candidate runs for office
<code>page</code>	For paginating through results, starting at page 1
<code>support_oppose</code>	Support or opposition
<code>election_full</code>	<code>True</code> indicates that full election period of a candidate. <code>False</code> indicates that two year election cycle.
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_communication_costs_totals_by_candidate
    Get communication costs totals by candidate
```

Description

Total communications costs aggregated across committees on supported or opposed candidates by cycle or candidate election year.

Usage

```
fec_get_communication_costs_totals_by_candidate(
    candidate_id,
    sort_nulls_last,
    page,
    cycle,
    sort_hide_null,
    election_full,
    sort_null_only,
    per_page,
    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>page</code>	For paginating through results, starting at page 1
<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>election_full</code>	<code>True</code> indicates that full election period of a candidate. <code>False</code> indicates that two year election cycle.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.

<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_efile_filings
    Get efile filings
```

Description

Basic information about electronic files coming into the FEC, posted as they are received.

Usage

```
fec_get_efile_filings(
    file_number,
    sort_nulls_last,
    page,
    per_page,
    sort_hide_null,
    committee_id,
    min_receipt_date,
    max_receipt_date,
    q_filer,
    sort_null_only,
    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>file_number</code>	Filing ID number
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>page</code>	For paginating through results, starting at page 1
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.

<code>min_receipt_date</code>	Selects all filings received after this date(MM/DD/YYYY or YYYY-MM-DD)
<code>max_receipt_date</code>	Selects all filings received before this date(MM/DD/YYYY or YYYY-MM-DD)
<code>q_filer</code>	Keyword search for filer name or ID
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

`fec_get_efile_reports_house_senate`
Get efile reports house senate

Description

Key financial data reported periodically by committees as they are reported. This feed includes summary information from the the House F3 reports, the presidential F3p reports and the PAC and party F3x reports. Generally, committees file reports on a quarterly or monthly basis, but some must also submit a report 12 days before primary elections. Therefore, during the primary season, the period covered by this file may be different for different committees. These totals also incorporate any changes made by committees, if any report covering the period is amended. **DISCLAIMER:** The field labels contained within this resource are subject to change. We are attempting to succinctly label these fields while conveying clear meaning to ensure accessibility for all users.

Usage

```
fec_get_efile_reports_house_senate(
  file_number,
  sort_nulls_last,
  page,
  per_page,
  sort_hide_null,
  committee_id,
  min_receipt_date,
  max_receipt_date,
  q_filer,
  sort_null_only,
```

```

    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

<code>file_number</code>	Filing ID number
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>page</code>	For paginating through results, starting at page 1
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>min_receipt_date</code>	Selects all filings received after this date(MM/DD/YYYY or YYYY-MM-DD)
<code>max_receipt_date</code>	Selects all filings received before this date(MM/DD/YYYY or YYYY-MM-DD)
<code>q_filer</code>	Keyword search for filer name or ID
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

`fec_get_electioneering`
Get electioneering

Description

An electioneering communication is any broadcast, cable or satellite communication that fulfills each of the following conditions: *The communication refers to a clearly identified federal candidate. The communication is publicly distributed by a television station, radio station, cable television system or satellite system for a fee. The communication is distributed within 60 days prior to a general election or 30 days prior to a primary election to federal office.*

Usage

```
fec_get_electioneering(
  candidate_id,
  max_amount,
  sort_nulls_last,
  page,
  sort_hide_null,
  committee_id,
  min_date,
  min_amount,
  per_page,
  sort_null_only,
  description,
  sort,
  report_year,
```

```

    last_index,
    max_date,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>max_amount</code>	Filter for all amounts less than a value.
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>page</code>	For paginating through results, starting at page 1
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>min_date</code>	Minimum disbursement date
<code>min_amount</code>	Filter for all amounts greater than a value.
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>description</code>	BKTODO: No description provided.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>report_year</code>	Forms with coverage date - year from the coverage ending date. Forms without coverage date - year from the receipt date.
<code>last_index</code>	Index of last result from previous page
<code>max_date</code>	Maximum disbursement date
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_electioneering_aggregates
    Get electioneering aggregates
```

Description

Electioneering communications costs aggregates

Usage

```
fec_get_electioneering_aggregates(
    candidate_id,
    sort_nulls_last,
    page,
    cycle,
    sort_hide_null,
    committee_id,
    sort_null_only,
    per_page,
    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>page</code>	For paginating through results, starting at page 1
<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_electioneering_by_candidate
    Get electioneering by candidate
```

Description

Electioneering costs aggregated by candidate

Usage

```
fec_get_electioneering_by_candidate(
    office,
    candidate_id,
    cycle,
    district,
    state,
    page,
    sort_hide_null,
    election_full,
    sort_nulls_last,
    sort_null_only,
    per_page,
    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>office</code>	Federal office candidate runs for: H, S or P
<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>district</code>	Two-digit US House district of the office the candidate is running for. Presidential, Senate and House at-large candidates will have District 00.
<code>state</code>	US state or territory where a candidate runs for office
<code>page</code>	For paginating through results, starting at page 1
<code>sort_hide_null</code>	Hide null values on sorted column(s).

<code>election_full</code>	<code>True</code> indicates that full election period of a candidate. <code>False</code> indicates that two year election cycle.
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use <code>-</code> for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_electioneering_totals_by_candidate
    Get electioneering totals by candidate
```

Description

Total electioneering communications spent on candidates by cycle or candidate election year

Usage

```
fec_get_electioneering_totals_by_candidate(
    candidate_id,
    sort_nulls_last,
    page,
    cycle,
    sort_hide_null,
    election_full,
    sort_null_only,
    per_page,
    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>page</code>	For paginating through results, starting at page 1

<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>election_full</code>	<code>True</code> indicates that full election period of a candidate. <code>False</code> indicates that two year election cycle.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

`fec_get_elections` *Get elections*

Description

Look at the top-level financial information for all candidates running for the same office. Choose a 2-year cycle, and `house`, `senate` or `presidential`. If you are looking for a Senate seat, you will need to select the state using a two-letter abbreviation. House races require state and a two-digit district number. Since this endpoint reflects financial information, it will only have candidates once they file financial reporting forms. Query the `/candidates` endpoint to retrieve an-up-to-date list of all the candidates that filed to run for a particular seat.

Usage

```
fec_get_elections(
    office,
    page,
    district,
    state,
    cycle,
    sort_hide_null,
    election_full,
    sort_nulls_last,
    sort_null_only,
    per_page,
    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>office</code>	Federal office candidate runs for: H, S or P
<code>page</code>	For paginating through results, starting at page 1
<code>district</code>	Two-digit US House district of the office the candidate is running for. Presidential, Senate and House at-large candidates will have District 00.
<code>state</code>	US state or territory where a candidate runs for office
<code>cycle</code>	Two-year election cycle in which a candidate runs for office. Calculated from Form 2. The cycle begins with an odd year and is named for its ending, even year. This cycle follows the traditional house election cycle and subdivides the presidential and Senate elections into comparable two-year blocks. To retrieve data for the entire four years of a presidential term or six years of a senatorial term, you will need the <code>election_full</code> flag.
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>election_full</code>	<code>True</code> indicates that full election period of a candidate. <code>False</code> indicates that two year election cycle.
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

`fec_get_elections_search`

Get elections search

Description

List elections by cycle, office, state, and district.

Usage

```
fec_get_elections_search(
  office,
  cycle,
  district,
  zip,
  state,
  sort_hide_null,
  sort_nulls_last,
  page,
  sort_null_only,
  per_page,
  sort,
  api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>office</code>	BKTODO: No description provided.
<code>cycle</code>	Two-year election cycle in which a candidate runs for office. Calculated from Form 2. The cycle begins with an odd year and is named for its ending, even year. This cycle follows the traditional house election cycle and subdivides the presidential and Senate elections into comparable two-year blocks. To retrieve data for the entire four years of a presidential term or six years of a senatorial term, you will need the <code>election_full</code> flag.
<code>district</code>	Two-digit US House district of the office the candidate is running for. Presidential, Senate and House at-large candidates will have District 00.
<code>zip</code>	Zip code
<code>state</code>	US state or territory where a candidate runs for office
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>page</code>	For paginating through results, starting at page 1
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use - for descending order. ex: <code>-case_no</code>
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

`fec_get_elections_summary`
Get elections summary

Description

List elections by cycle, office, state, and district.

Usage

```
fec_get_elections_summary(  
    office,  
    cycle,  
    district,  
    state,  
    election_full,  
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")  
)
```

Arguments

<code>office</code>	Federal office candidate runs for: H, S or P
<code>cycle</code>	Two-year election cycle in which a candidate runs for office. Calculated from Form 2. The cycle begins with an odd year and is named for its ending, even year. This cycle follows the traditional house election cycle and subdivides the presidential and Senate elections into comparable two-year blocks. To retrieve data for the entire four years of a presidential term or six years of a senatorial term, you will need the <code>election_full</code> flag.
<code>district</code>	Two-digit US House district of the office the candidate is running for. Presidential, Senate and House at-large candidates will have District 00.
<code>state</code>	US state or territory where a candidate runs for office
<code>election_full</code>	<code>True</code> indicates that full election period of a candidate. <code>False</code> indicates that two year election cycle.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

```
fec_get_election_dates
```

Get election dates

Description

FEC election dates since 1995.

Usage

```
fec_get_election_dates(
  max_update_date,
  sort_nulls_last,
  sort_hide_null,
  max_primary_general_date,
  min_update_date,
  max_create_date,
  per_page,
  min_election_date,
  election_party,
  election_type_id,
  page,
  min_create_date,
  min_primary_general_date,
  election_year,
  election_district,
  office_sought,
  sort_null_only,
  max_election_date,
  sort,
  election_state,
  api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

max_update_date
The maximum date this record was last updated.(MM/DD/YYYY or YYYY-MM-DD)

sort_nulls_last
Toggle that sorts null values last

sort_hide_null
Hide null values on sorted column(s).

max_primary_general_date
The maximum date of primary or general election.(MM/DD/YYYY or YYYY-MM-DD)

<code>min_update_date</code>	The minimum date this record was last updated.(MM/DD/YYYY or YYYY-MM-DD)
<code>max_create_date</code>	The maximum date this record was added to the system.(MM/DD/YYYY or YYYY-MM-DD)
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>min_election_date</code>	The minimum date of election.
<code>election_party</code>	Party, if applicable.
<code>election_type_id</code>	Election type id
<code>page</code>	For paginating through results, starting at page 1
<code>min_create_date</code>	The minimum date this record was added to the system.(MM/DD/YYYY or YYYY-MM-DD)
<code>min_primary_general_date</code>	The minimum date of primary or general election.(MM/DD/YYYY or YYYY-MM-DD)
<code>election_year</code>	Year of election
<code>election_district</code>	House district of the office sought, if applicable.
<code>office_sought</code>	House, Senate or presidential office.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>max_election_date</code>	The maximum date of election.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>election_state</code>	State or territory of the office sought.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

fec_get_filings	<i>Get filings</i>
-----------------	--------------------

Description

All official records and reports filed by or delivered to the FEC. Note: because the filings data includes many records, counts for large result sets are approximate; you will want to page through the records until no records are returned.

Usage

```
fec_get_filings(
  office,
  file_number,
  form_category,
  cycle,
  district,
  document_type,
  sort_hide_null,
  state,
  amendment_indicator,
  sort_nulls_last,
  is_amended,
  filer_type,
  max_receipt_date,
  per_page,
  primary_general_indicator,
  request_type,
  report_year,
  form_type,
  candidate_id,
  committee_type,
  beginning_image_number,
  page,
  sort,
  committee_id,
  min_receipt_date,
  sort_null_only,
  q_filer,
  report_type,
  party,
  most_recent,
  api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

office	Federal office candidate runs for: H, S or P
--------	--

file_number	Filing ID number
form_category	The forms filed are categorized based on the nature of the filing: - REPORT F3, F3X, F3P, F3L, F4, F5, F7, F13 - NOTICE F5, F24, F6, F9, F10, F11 - STATEMENT F1, F2 - OTHER F1M, F8, F99, F12, FRQ
cycle	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
district	Two-digit US House district of the office the candidate is running for. Presidential, Senate and House at-large candidates will have District 00.
document_type	The type of document for documents other than reports: - 2 24 Hour Contribution Notice - 4 48 Hour Contribution Notice - A Debt Settlement Statement - B Acknowledgment of Receipt of Debt Settlement Statement - C RFAI: Debt Settlement First Notice - D Commission Debt Settlement Review - E Commission Response TO Debt Settlement Request - F Administrative Termination - G Debt Settlement Plan Amendment - H Disavowal Notice - I Disavowal Response - J Conduit Report - K Termination Approval - L Repeat Non-Filer Notice - M Filing Frequency Change Notice - N Paper Amendment to Electronic Report - O Acknowledgment of Filing Frequency Change - S RFAI: Debt Settlement Second - T Miscellaneous Report TO FEC - V Repeat Violation Notice (441A OR 441B) - P Notice of Paper Filing - R F3L Filing Frequency Change Notice - Q Acknowledgment of F3L Filing Frequency Change - U Unregistered Committee Notice
sort_hide_null	Hide null values on sorted column(s).
state	US state or territory where a candidate runs for office
amendment_indicator	Amendment types: -N new -A amendment -T terminated -C consolidated -M multi-candidate -S secondary NULL might be new or amendment. If amendment indicator is null and the filings is the first or first in a chain treat it as if it was a new. If it is not the first or first in a chain then treat the filing as an amendment.
sort_nulls_last	Toggle that sorts null values last
is_amended	False indicates that a report is the most recent. True indicates that the report has been superseded by an amendment.
filer_type	The method used to file with the FEC, either electronic or on paper.
max_receipt_date	Selects all filings received before this date(MM/DD/YYYY or YYYY-MM-DD)
per_page	The number of results returned per page. Defaults to 20.
primary_general_indicator	Primary, general or special election indicator.
request_type	Requests for additional information (RFAIs) sent to filers. The request type is based on the type of document filed: - 1 Statement of Organization

	- 2 Report of Receipts and Expenditures (Form 3 and 3X) - 3 Second Notice - Reports - 4 Request for Additional Information - 5 Informational - Reports - 6 Second Notice - Statement of Organization - 7 Failure to File - 8 From Public Disclosure - 9 From Multi Candidate Status
report_year	Forms with coverage date - year from the coverage ending date. Forms without coverage date - year from the receipt date.
form_type	The form where the underlying data comes from, for example, Form 1 would appear as F1: - F1 Statement of Organization - F1M Notification of Multicandidate Status - F2 Statement of Candidacy - F3 Report of Receipts and Disbursements for an Authorized Committee - F3P Report of Receipts and Disbursements by an Authorized Committee of a Candidate for The Office of President or Vice President - F3L Report of Contributions Bundled by Lobbyists/Registrants and Lobbyist/Registrant PACs - F3X Report of Receipts and Disbursements for other than an Authorized Committee - F4 Report of Receipts and Disbursements for a Committee or Organization Supporting a Nomination Convention - F5 Report of Independent Expenditures Made and Contributions Received - F6 48 Hour Notice of Contributions/Loans Received - F7 Report of Communication Costs by Corporations and Membership Organizations - F8 Debt Settlement Plan - F9 24 Hour Notice of Disbursements for Electioneering Communications - F13 Report of Donations Accepted for Inaugural Committee - F99 Miscellaneous Text - FRQ Request for Additional Information
candidate_id	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
committee_type	The one-letter type code of the organization: - C communication cost - D delegate - E electioneering communication - H House - I independent expenditure filer (not a committee) - N PAC - nonqualified - O independent expenditure-only (super PACs) - P presidential - Q PAC - qualified - S Senate - U single candidate independent expenditure - V PAC with non-contribution account, nonqualified - W PAC with non-contribution account, qualified - X party, nonqualified - Y party, qualified - Z national party non-federal account
beginning_image_number	Unique identifier for the electronic or paper report. This number is used to construct PDF URLs to the original document.
page	For paginating through results, starting at page 1
sort	Provide a field to sort by. Use - for descending order. ex: <code>-case_no</code>
committee_id	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
min_receipt_date	Selects all filings received after this date(MM/DD/YYYY or YYYY-MM-DD)

<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>q_filer</code>	Keyword search for filer name or ID
<code>report_type</code>	Name of report where the underlying data comes from: - 10D Pre-Election - 10G Pre-General - 10P Pre-Primary - 10R Pre-Run-Off - 10S Pre-Special - 12C Pre-Convention - 12G Pre-General - 12P Pre-Primary - 12R Pre-Run-Off - 12S Pre-Special - 30D Post-Election - 30G Post-General - 30P Post-Primary - 30R Post-Run-Off - 30S Post-Special - 60D Post-Convention - M1 January Monthly - M10 October Monthly - M11 November Monthly - M12 December Monthly - M2 February Monthly - M3 March Monthly - M4 April Monthly - M5 May Monthly - M6 June Monthly - M7 July Monthly - M8 August Monthly - M9 September Monthly - MY Mid-Year Report - Q1 April Quarterly - Q2 July Quarterly - Q3 October Quarterly - TER Termination Report - YE Year-End - ADJ COMP ADJUST AMEND - CA COMPREHENSIVE AMEND - 90S Post Inaugural Supplement - 90D Post Inaugural - 48 48 Hour Notification - 24 24 Hour Notification - M7S July Monthly/Semi-Annual - MSA Monthly Semi-Annual (MY) - MYS Monthly Year End/Semi-Annual - Q2S July Quarterly/Semi-Annual - QSA Quarterly Semi-Annual (MY) - QYS Quarterly Year End/Semi-Annual - QYE Quarterly Semi-Annual (YE) - QMS Quarterly Mid-Year/ Semi-Annual - MSY Monthly Semi-Annual (YE)
<code>party</code>	Three-letter code for the party affiliated with a candidate or committee. For example, DEM for Democratic Party and REP for Republican Party.
<code>most_recent</code>	Report is either new or is the most-recently filed amendment
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

`hits_returned` Number of results to return (max 10)

`af_report_year` Admin fine report year

`case_max_open_date` The latest date opened of case

ao_max_issue_date Latest issue date of advisory opinion
case_statutory_citation Statutory citations
case_respondents Cases respondents
q Text to search legal documents for
ao_min_issue_date Earliest issue date of advisory opinion
af_max_fd_date The latest Final Determination date
from_hit Get results starting from this index
af_fd_fine_amount Final Determination fine amount
type Legal Document type to refine search by - statutes - regulations - advisory_opinions - murs - admin_fines
af_name Admin fine committee name
ao_requestor_type Code of the advisory opinion requestor type.
ao_statutory_citation Statutory citations
ao_entity_name Name of commenter or representative
mur_type Type of MUR : current or archived
ao_regulatory_citation Regulatory citations
af_committee_id Admin fine committee ID
ao_requestor The requestor of the advisory opinion
case_citation_require_all Require all citations to be in document (default behavior is any)
af_min_fd_date The earliest Final Determination date
ao_is_pending AO is pending
af_rtb_fine_amount Reason to Believe fine amount
case_election_cycles Cases election cycles
ao_category Category of the document
ao_citation_require_all Require all citations to be in document (default behavior is any)
case_dispositions Cases dispositions

<code>af_max_rtb_date</code>	The latest Reason to Believe date
<code>case_min_open_date</code>	The earliest date opened of case
<code>case_max_close_date</code>	The latest date closed of case
<code>ao_min_request_date</code>	Earliest request date of advisory opinion
<code>ao_status</code>	Status of AO (pending, withdrawn, or final)
<code>case_doc_category_id</code>	Select one or more <code>case_doc_category_id</code> to filter by corresponding <code>CASE_DOCUMENT_CATEGORY</code> - 1 - Conciliation Agreements - 2 - Complaint, Responses, Designation of Counsel and Extensions of Timee - 3 - General Counsel Reports, Briefs, Notifications and Responses - 4 - Certifications - 5 - Civil Penalties, Disgorgements and Other Payments - 6 - Statements of Reasons
<code>af_min_rtb_date</code>	The earliest Reason to Believe date
<code>ao_name</code>	Force advisory opinion name
<code>case_regulatory_citation</code>	Regulatory citations
<code>ao_no</code>	Force advisory opinion number
<code>case_min_close_date</code>	The earliest date closed of case
<code>sort</code>	Provide a field to sort by. Use - for descending order. ex: <code>-case_no</code>
<code>ao_max_request_date</code>	Latest request date of advisory opinion
<code>case_no</code>	Enforcement matter case number
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

`fec_get_names_audit_candidates`
Get names audit candidates

Description

Search for candidates or committees by name. If you're looking for information on a particular person or group, using a name to find the `candidate_id` or `committee_id` on this endpoint can be a helpful first step.

Usage

```
fec_get_names_audit_candidates(  
  q,  
  api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")  
)
```

Arguments

<code>q</code>	Name (candidate or committee) to search for
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_names_audit_committees  
  Get names audit committees
```

Description

Search for candidates or committees by name. If you're looking for information on a particular person or group, using a name to find the `candidate_id` or `committee_id` on this endpoint can be a helpful first step.

Usage

```
fec_get_names_audit_committees(  
  q,  
  api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")  
)
```

Arguments

<code>q</code>	Name (candidate or committee) to search for
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_names_candidates
```

Get names candidates

Description

Search for candidates or committees by name. If you're looking for information on a particular person or group, using a name to find the `candidate_id` or `committee_id` on this endpoint can be a helpful first step.

Usage

```
fec_get_names_candidates(
  q,
  api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>q</code>	Name (candidate or committee) to search for
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_names_committees
```

Get names committees

Description

Search for candidates or committees by name. If you're looking for information on a particular person or group, using a name to find the `candidate_id` or `committee_id` on this endpoint can be a helpful first step.

Usage

```
fec_get_names_committees(
  q,
  api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

q	Name (candidate or committee) to search for
api_key	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

fec_get_operations_log
Get operations log

Description

The Operations log contains details of each report loaded into the database. It is primarily used as status check to determine when all of the data processes, from initial entry through review are complete.

Usage

```
fec_get_operations_log(  
    max_coverage_end_date,  
    sort_nulls_last,  
    amendment_indicator,  
    sort_hide_null,  
    max_receipt_date,  
    per_page,  
    min_transaction_data_complete_date,  
    form_type,  
    max_transaction_data_complete_date,  
    beginning_image_number,  
    page,  
    min_coverage_end_date,  
    sort,  
    min_receipt_date,  
    sort_null_only,  
    candidate_committee_id,  
    report_type,  
    report_year,  
    status_num,  
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")  
)
```

Arguments

max_coverage_end_date	Ending date of the reporting period before this date(MM/DD/YYYY or YYYY-MM-DD)
sort_nulls_last	Toggle that sorts null values last
amendment_indicator	Amendment types: -N new -A amendment -T terminated -C consolidated -M multi-candidate -S secondary NULL might be new or amendment. If amendment indicator is null and the filings is the first or first in a chain treat it as if it was a new. If it is not the first or first in a chain then treat the filing as an amendment.
sort_hide_null	Hide null values on sorted column(s).
max_receipt_date	Selects all filings received before this date(MM/DD/YYYY or YYYY-MM-DD)
per_page	The number of results returned per page. Defaults to 20.
min_transaction_data_complete_date	Select all filings processed completely after this date(MM/DD/YYYY or YYYY-MM-DD)
form_type	The form where the underlying data comes from, for example, Form 1 would appear as F1: - F1 Statement of Organization - F1M Notification of Multicandidate Status - F2 Statement of Candidacy - F3 Report of Receipts and Disbursements for an Authorized Committee - F3P Report of Receipts and Disbursements by an Authorized Committee of a Candidate for The Office of President or Vice President - F3L Report of Contributions Bundled by Lobbyists/Registrants and Lobbyist/Registrant PACs - F3X Report of Receipts and Disbursements for other than an Authorized Committee - F4 Report of Receipts and Disbursements for a Committee or Organization Supporting a Nomination Convention - F5 Report of Independent Expenditures Made and Contributions Received - F6 48 Hour Notice of Contributions/Loans Received - F7 Report of Communication Costs by Corporations and Membership Organizations - F8 Debt Settlement Plan - F9 24 Hour Notice of Disbursements for Electioneering Communications - F13 Report of Donations Accepted for Inaugural Committee - F99 Miscellaneous Text - FRQ Request for Additional Information
max_transaction_data_complete_date	Select all filings processed completely before this date(MM/DD/YYYY or YYYY-MM-DD)
beginning_image_number	Unique identifier for the electronic or paper report. This number is used to construct PDF URLs to the original document.
page	For paginating through results, starting at page 1

min_coverage_end_date	Ending date of the reporting period after this date(MM/DD/YYYY or YYYY-MM-DD)
sort	Provide a field to sort by. Use - for descending order. ex: <code>-case_no</code>
min_receipt_date	Selects all filings received after this date(MM/DD/YYYY or YYYY-MM-DD)
sort_null_only	Toggle that filters out all rows having sort column that is non-null
candidate_committee_id	A unique identifier of the registered filer.
report_type	Name of report where the underlying data comes from: - 10D Pre-Election - 10G Pre-General - 10P Pre-Primary - 10R Pre-Run-Off - 10S Pre-Special - 12C Pre-Convention - 12G Pre-General - 12P Pre-Primary - 12R Pre-Run-Off - 12S Pre-Special - 30D Post-Election - 30G Post-General - 30P Post-Primary - 30R Post-Run-Off - 30S Post-Special - 60D Post-Convention - M1 January Monthly - M10 October Monthly - M11 November Monthly - M12 December Monthly - M2 February Monthly - M3 March Monthly - M4 April Monthly - M5 May Monthly - M6 June Monthly - M7 July Monthly - M8 August Monthly - M9 September Monthly - MY Mid-Year Report - Q1 April Quarterly - Q2 July Quarterly - Q3 October Quarterly - TER Termination Report - YE Year-End - ADJ COMP ADJUST AMEND - CA COMPREHENSIVE AMEND - 90S Post Inaugural Supplement - 90D Post Inaugural - 48 48 Hour Notification - 24 24 Hour Notification - M7S July Monthly/Semi-Annual - MSA Monthly Semi-Annual (MY) - MYS Monthly Year End/Semi-Annual - Q2S July Quarterly/Semi-Annual - QSA Quarterly Semi-Annual (MY) - QYS Quarterly Year End/Semi-Annual - QYE Quarterly Semi-Annual (YE) - QMS Quarterly Mid-Year/ Semi-Annual - MSY Monthly Semi-Annual (YE)
report_year	Forms with coverage date - year from the coverage ending date. Forms without coverage date - year from the receipt date.
status_num	Status of the transactional report. -0- Transaction is entered into the system. But not verified. -1- Transaction is verified.
api_key	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_presidential_contributions_by_candidate
    Get presidential contributions by candidate
```

Description

Net receipts per candidate. Filter with `contributor_state='US'` for national totals

Usage

```
fec_get_presidential_contributions_by_candidate(
    contributor_state,
    sort_nulls_last,
    page,
    sort_hide_null,
    election_year,
    sort_null_only,
    per_page,
    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>contributor_state</code>	State of contributor
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>page</code>	For paginating through results, starting at page 1
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>election_year</code>	Year of election
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

fec_get_presidential_contributions_by_size

Get presidential contributions by size

Description

Contribution receipts by size per candidate. Filter by candidate_id, election_year and/or size

Usage

```
fec_get_presidential_contributions_by_size(
  candidate_id,
  sort_nulls_last,
  page,
  sort_hide_null,
  election_year,
  size,
  sort_null_only,
  per_page,
  sort,
  api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

candidate_id	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office. -P00000001 All candidates -P00000002 Democrats -P00000003 Republicans
sort_nulls_last	Toggle that sorts null values last
page	For paginating through results, starting at page 1
sort_hide_null	Hide null values on sorted column(s).
election_year	Year of election
size	The total all contributions in the following ranges: -0 \$200 and under -200 \$200.01 - \$499. Unitemized contributions are included in the 0 category.
sort_null_only	Toggle that filters out all rows having sort column that is non-null
per_page	The number of results returned per page. Defaults to 20.
sort	Provide a field to sort by. Use - for descending order.
api_key	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_presidential_contributions_by_state
    Get presidential contributions by state
```

Description

Contribution receipts by state per candidate. Filter by candidate_id and/or election_year

Usage

```
fec_get_presidential_contributions_by_state(
    candidate_id,
    sort_nulls_last,
    page,
    sort_hide_null,
    election_year,
    sort_null_only,
    per_page,
    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

candidate_id	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office. -P00000001 All candidates -P00000002 Democrats -P00000003 Republicans
sort_nulls_last	Toggle that sorts null values last
page	For paginating through results, starting at page 1
sort_hide_null	Hide null values on sorted column(s).
election_year	Year of election
sort_null_only	Toggle that filters out all rows having sort column that is non-null
per_page	The number of results returned per page. Defaults to 20.
sort	Provide a field to sort by. Use - for descending order.
api_key	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_presidential_coverage_end_date
    Get presidential coverage end date
```

Description

Coverage end date per candidate. Filter by candidate_id and/or election_year

Usage

```
fec_get_presidential_coverage_end_date(
    candidate_id,
    sort_nulls_last,
    page,
    sort_hide_null,
    election_year,
    sort_null_only,
    per_page,
    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

candidate_id	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office. -P00000001 All candidates -P00000002 Democrats -P00000003 Republicans
sort_nulls_last	Toggle that sorts null values last
page	For paginating through results, starting at page 1
sort_hide_null	Hide null values on sorted column(s).
election_year	Year of election
sort_null_only	Toggle that filters out all rows having sort column that is non-null
per_page	The number of results returned per page. Defaults to 20.
sort	Provide a field to sort by. Use - for descending order.
api_key	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_presidential_financial_summary
    Get presidential financial summary
```

Description

Financial summary per candidate. Filter by candidate_id and/or election_year

Usage

```
fec_get_presidential_financial_summary(
    candidate_id,
    sort_nulls_last,
    page,
    sort_hide_null,
    election_year,
    sort_null_only,
    per_page,
    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

candidate_id	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office. -P00000001 All candidates -P00000002 Democrats -P00000003 Republicans
sort_nulls_last	Toggle that sorts null values last
page	For paginating through results, starting at page 1
sort_hide_null	Hide null values on sorted column(s).
election_year	Year of election
sort_null_only	Toggle that filters out all rows having sort column that is non-null
per_page	The number of results returned per page. Defaults to 20.
sort	Provide a field to sort by. Use - for descending order.
api_key	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

`fec_get_rad_analyst` *Get rad analyst*

Description

Use this endpoint to look up the RAD Analyst for a committee. The mission of the Reports Analysis Division (RAD) is to ensure that campaigns and political committees file timely and accurate reports that fully disclose their financial activities. RAD is responsible for reviewing statements and financial reports filed by political committees participating in federal elections, providing assistance and guidance to the committees to properly file their reports, and for taking appropriate action to ensure compliance with the Federal Election Campaign Act (FECA).

Usage

```
fec_get_rad_analyst(
    min_assignment_update_date,
    max_assignment_update_date,
    analyst_short_id,
    email,
    page,
    sort_nulls_last,
    title,
    sort_hide_null,
    committee_id,
    name,
    telephone_ext,
    analyst_id,
    sort_null_only,
    per_page,
    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>min_assignment_update_date</code>	Filter results for assignment updates made after this date
<code>max_assignment_update_date</code>	Filter results for assignment updates made before this date
<code>analyst_short_id</code>	Short ID of RAD analyst
<code>email</code>	Email of RAD analyst
<code>page</code>	For paginating through results, starting at page 1
<code>sort_nulls_last</code>	Toggle that sorts null values last

<code>title</code>	Title of RAD analyst
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>name</code>	Name of RAD analyst
<code>telephone_ext</code>	Telephone extension of RAD analyst
<code>analyst_id</code>	ID of RAD analyst
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

```
fec_get_reporting_dates
    Get reporting dates
```

Description

FEC election dates since 1995.

Usage

```
fec_get_reporting_dates(
    max_update_date,
    page,
    max_due_date,
    min_create_date,
    min_due_date,
    sort_hide_null,
    sort_nulls_last,
    min_update_date,
    max_create_date,
    per_page,
    sort_null_only,
    sort,
    report_year,
    report_type,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

max_update_date	The maximum date this record was last updated.(MM/DD/YYYY or YYYY-MM-DD)
page	For paginating through results, starting at page 1
max_due_date	The maximum date the report is due.(MM/DD/YYYY or YYYY-MM-DD)
min_create_date	The minimum date this record was added to the system.(MM/DD/YYYY or YYYY-MM-DD)
min_due_date	The minimum date the report is due.(MM/DD/YYYY or YYYY-MM-DD)
sort_hide_null	Hide null values on sorted column(s).
sort_nulls_last	Toggle that sorts null values last
min_update_date	The minimum date this record was last updated.(MM/DD/YYYY or YYYY-MM-DD)
max_create_date	The maximum date this record was added to the system.(MM/DD/YYYY or YYYY-MM-DD)
per_page	The number of results returned per page. Defaults to 20.
sort_null_only	Toggle that filters out all rows having sort column that is non-null
sort	Provide a field to sort by. Use - for descending order.
report_year	Forms with coverage date - year from the coverage ending date. Forms without coverage date - year from the receipt date.
report_type	Name of report where the underlying data comes from: - 10D Pre-Election - 10G Pre-General - 10P Pre-Primary - 10R Pre-Run-Off - 10S Pre-Special - 12C Pre-Convention - 12G Pre-General - 12P Pre-Primary - 12R Pre-Run-Off - 12S Pre-Special - 30D Post-Election - 30G Post-General - 30P Post-Primary - 30R Post-Run-Off - 30S Post-Special - 60D Post-Convention - M1 January Monthly - M10 October Monthly - M11 November Monthly - M12 December Monthly - M2 February Monthly - M3 March Monthly - M4 April Monthly - M5 May Monthly - M6 June Monthly - M7 July Monthly - M8 August Monthly - M9 September Monthly - MY Mid-Year Report - Q1 April Quarterly - Q2 July Quarterly - Q3 October Quarterly - TER Termination Report - YE Year-End - ADJ COMP ADJUST AMEND - CA COMPREHENSIVE AMEND - 90S Post Inaugural Supplement - 90D Post Inaugural - 48 48 Hour Notification - 24 24 Hour Notification - M7S July Monthly/Semi-Annual - MSA Monthly Semi-Annual (MY) - MYS Monthly Year End/Semi-Annual - Q2S July Quarterly/Semi-Annual - QSA Quarterly Semi-Annual (MY) - QYS Quarterly Year End/Semi-Annual - QYE Quarterly Semi-Annual

	(YE) - QMS Quarterly Mid-Year/ Semi-Annual - MSY Monthly Semi-Annual (YE)

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

fec_get_reports_entity_type
Get reports entity type

Description

Each report represents the summary information from Form 3, Form 3X and Form 3P. These reports have key statistics that illuminate the financial status of a given committee. Things like cash on hand, debts owed by committee, total receipts, and total disbursements are especially helpful for understanding a committee's financial dealings. By default, this endpoint includes both amended and final versions of each report. To restrict to only the final versions of each report, use `is_amended=false`; to retrieve only reports that have been amended, use `is_amended=true`. Several different reporting structures exist, depending on the type of organization that submits financial information. To see an example of these reporting requirements, look at the summary and detailed summary pages of Form 3, Form 3X, and Form 3P. **DISCLAIMER:** The field labels contained within this resource are subject to change. We are attempting to succinctly label these fields while conveying clear meaning to ensure accessibility for all users.

Usage

```
fec_get_reports_entity_type(
  min_debts_owed_amount,
  max_debts_owed_expenditures,
  sort_hide_null,
  year,
  max_cash_on_hand_end_period_amount,
  filer_type,
  max_party_coordinated_expenditures,
  q_spender,
  max_receipt_date,
  per_page,
  max_independent_expenditures,
  min_party_coordinated_expenditures,
  committee_type,
  page,
  min_total_contributions,
  min_cash_on_hand_end_period_amount,
```

```

    min_receipt_date,
    sort_null_only,
    min_independent_expenditures,
    q_filer,
    max_disbursements_amount,
    max_total_contributions,
    cycle,
    amendment_indicator,
    sort_nulls_last,
    max_receipts_amount,
    is_amended,
    min_disbursements_amount,
    min_receipts_amount,
    candidate_id,
    beginning_image_number,
    sort,
    committee_id,
    report_type,
    most_recent,
    entity_type,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

min_debts_owed_amount
Filter for all amounts greater than a value.

max_debts_owed_expenditures
Filter for all amounts less than a value.

sort_hide_null
Hide null values on sorted column(s).

year
Forms with coverage date - year from the coverage ending date. Forms without coverage date - year from the receipt date.

max_cash_on_hand_end_period_amount
Filter for all amounts less than a value.

filer_type
The method used to file with the FEC, either electronic or on paper.

max_party_coordinated_expenditures
Filter for all amounts less than a value.

q_spender
Keyword search for spender name or ID

max_receipt_date
Selects all items received by FEC before this date(MM/DD/YYYY or YYYY-MM-DD)

per_page
The number of results returned per page. Defaults to 20.

max_independent_expenditures
Filter for all amounts less than a value.

min_party_coordinated_expenditures
Filter for all amounts greater than a value.

committee_type
 The one-letter type code of the organization: - C communication cost - D delegate - E electioneering communication - H House - I independent expenditure filer (not a committee) - N PAC - nonqualified - O independent expenditure-only (super PACs) - P presidential - Q PAC - qualified - S Senate - U single candidate independent expenditure - V PAC with non-contribution account, nonqualified - W PAC with non-contribution account, qualified - X party, nonqualified - Y party, qualified - Z national party non-federal account

page For paginating through results, starting at page 1

min_total_contributions
 Filter for all amounts greater than a value.

min_cash_on_hand_end_period_amount
 Filter for all amounts greater than a value.

min_receipt_date
 Selects all items received by FEC after this date(MM/DD/YYYY or YYYY-MM-DD)

sort_null_only
 Toggle that filters out all rows having sort column that is non-null

min_independent_expenditures
 Filter for all amounts greater than a value.

q_filer Keyword search for filer name or ID

max_disbursements_amount
 Filter for all amounts less than a value.

max_total_contributions
 Filter for all amounts less than a value.

cycle Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.

amendment_indicator
 Amendment types: -N new -A amendment -T terminated -C consolidated -M multi-candidate -S secondary NULL might be new or amendment. If amendment indicator is null and the filings is the first or first in a chain treat it as if it was a new. If it is not the first or first in a chain then treat the filing as an amendment.

sort_nulls_last
 Toggle that sorts null values last

max_receipts_amount
 Filter for all amounts less than a value.

is_amended False indicates that a report is the most recent. True indicates that the report has been superseded by an amendment.

min_disbursements_amount
 Filter for all amounts greater than a value.

min_receipts_amount
 Filter for all amounts greater than a value.

<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>beginning_image_number</code>	Unique identifier for the electronic or paper report. This number is used to construct PDF URLs to the original document.
<code>sort</code>	Provide a field to sort by. Use - for descending order. ex: <code>-case_no</code>
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>report_type</code>	Report type; prefix with "-" to exclude. Name of report where the underlying data comes from: - 10D Pre-Election - 10G Pre-General - 10P Pre-Primary - 10R Pre-Run-Off - 10S Pre-Special - 12C Pre-Convention - 12G Pre-General - 12P Pre-Primary - 12R Pre-Run-Off - 12S Pre-Special - 30D Post-Election - 30G Post-General - 30P Post-Primary - 30R Post-Run-Off - 30S Post-Special - 60D Post-Convention - M1 January Monthly - M10 October Monthly - M11 November Monthly - M12 December Monthly - M2 February Monthly - M3 March Monthly - M4 April Monthly - M5 May Monthly - M6 June Monthly - M7 July Monthly - M8 August Monthly - M9 September Monthly - MY Mid-Year Report - Q1 April Quarterly - Q2 July Quarterly - Q3 October Quarterly - TER Termination Report - YE Year-End - ADJ COMP ADJUST AMEND - CA COMPREHENSIVE AMEND
<code>most_recent</code>	Report is either new or is the most-recently filed amendment
<code>entity_type</code>	Committee groupings based on FEC filing form. Choose one of: <code>presidential</code> , <code>pac-party</code> , <code>house-senate</code> , or <code>ie-only</code>
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

`fec_get_schedules_schedule_a`

Get schedules schedule a

Description

This description is for both `/schedules/schedule_a/` and `/schedules/schedule_a/{sub_id}/`. This endpoint provides itemized receipts. Schedule A records describe itemized receipts, including contributions from individuals. If you are interested in contributions from an individual, use the `/schedules/schedule_a/` endpoint. For a more complete description of all Schedule A records visit [About receipts data](#). If you are interested in our "is_individual" methodology visit our [methodology page](#). The `/schedules/schedule_a/`

endpoint is not paginated by page number. This endpoint uses keyset pagination to improve query performance and these indices are required to properly page through this large dataset. To request the next page, you should append the values found in the `last_indexes` object from pagination to the URL of your last request as additional parameters. For example, when sorting by `contribution_receipt_date`, you might receive a page of results with the two scenarios of following pagination information: case #1: `pagination: { pages: 2152643, per_page: 20, count: 43052850, last_indexes: { last_index: "`

 case #2 (results which include `contribution_receipt_date = NULL`): `pagination: { pages: 2152644, pe`
 To fetch the next page of sorted results, append `last_index=230880619` and `last_contribution_receipt_date=2`
 to the URL and when reaching `contribution_receipt_date=NULL`, append `last_index=230880639`
 and `sort_null_only=True`. We strongly advise paging through these results using sort indices. The default sort is ascending by `contribution_receipt_date` (`deprecated`, will be descending). If you do not page using sort indices, some transactions may be unintentionally filtered out. Calls to `/schedules/schedule_a/` may return many records. For large result sets, the record counts found in the pagination object are approximate; you will need to page through the records until no records are returned. To avoid throwing the "out of range" exception on the last page, one recommendation is to use total count and `per_page` to control the traverse loop of results. The `/schedules/schedule_a/{sub_id}/` endpoint returns a single transaction, but it does include a pagination object class. Please ignore the information in that object class.

Usage

```
fec_get_schedules_schedule_a(
    max_load_date,
    max_amount,
    max_image_number,
    contributor_occupation,
    recipient_committee_designation,
    sort_hide_null,
    is_individual,
    line_number,
    contributor_type,
    recipient_committee_type,
    per_page,
    contributor_zip,
    contributor_city,
    last_index,
    last_contribution_receipt_amount,
    contributor_id,
    recipient_committee_org_type,
    contributor_state,
    sort,
    two_year_transaction_period,
    min_date,
    committee_id,
    contributor_employer,
    min_load_date,
    last_contribution_receipt_date,
```

```

    min_image_number,
    contributor_name,
    sort_null_only,
    image_number,
    min_amount,
    max_date,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

max_load_date Maximum load date

max_amount Filter for all amounts less than a value.

max_image_number
Maximum image number of the page where the schedule item is reported

contributor_occupation
Occupation of contributor, filers need to make an effort to gather this information

recipient_committee_designation
The one-letter designation code of the organization: - A authorized by a candidate - J joint fundraising committee - P principal campaign committee of a candidate - U unauthorized - B lobbyist/registrant PAC - D leadership PAC

sort_hide_null
Hide null values on sorted column(s).

is_individual Restrict to non-earmarked individual contributions where memo code is true. Filtering individuals is useful to make sure contributions are not double reported and in creating breakdowns of the amount of money coming from individuals.

line_number Filter for form and line number using the following format: FORM-LINENUMBER. For example an argument such as F3X-16 would filter down to all entries from form F3X line number 16.

contributor_type
Filters individual or committee contributions based on line number

recipient_committee_type
The one-letter type code of the organization: - C communication cost - D delegate - E electioneering communication - H House - I independent expenditure filer (not a committee) - N PAC - nonqualified - O independent expenditure-only (super PACs) - P presidential - Q PAC - qualified - S Senate - U single candidate independent expenditure - V PAC with non-contribution account, nonqualified - W PAC with non-contribution account, qualified - X party, nonqualified - Y party, qualified - Z national party non-federal account

per_page The number of results returned per page. Defaults to 20.

contributor_zip
Zip code of contributor

contributor_city City of contributor

last_index Index of last result from previous page

last_contribution_receipt_amount
When sorting by **contribution_receipt_amount**, this is populated with the **contribution_receipt_amount** of the last result. However, you will need to pass the index of that last result to **last_index** to get the next page.

contributor_id
The FEC identifier should be represented here if the contributor is registered with the FEC.

recipient_committee_org_type
The one-letter code for the kind for organization: - C corporation - L labor organization - M membership organization - T trade association - V cooperative - W corporation without capital stock

contributor_state
State of contributor

sort Provide a field to sort by. Use - for descending order.

two_year_transaction_period
This is a two-year period that is derived from the year a transaction took place in the Itemized Schedule A and Schedule B tables. In cases where we have the date of the transaction (**contribution_receipt_date** in **schedules/schedule_a**, **disbursement_date** in **schedules/schedule_b**) the **two_year_transaction_period** is named after the ending, even-numbered year. If we do not have the date of the transaction, we fall back to using the report year (**report_year** in both tables) instead, making the same cycle adjustment as necessary. If no transaction year is specified, the results default to the most current cycle.

min_date Minimum date

committee_id A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.

contributor_employer
Employer of contributor, filers need to make an effort to gather this information

min_load_date Minimum load date

last_contribution_receipt_date
When sorting by **contribution_receipt_date**, this is populated with the **contribution_receipt_date** of the last result. However, you will need to pass the index of that last result to **last_index** to get the next page.

min_image_number
Minimum image number of the page where the schedule item is reported

contributor_name
Name of contributor

sort_null_only
Toggle that filters out all rows having sort column that is non-null

<code>image_number</code>	An unique identifier for each page where the electronic or paper filing is reported.
<code>min_amount</code>	Filter for all amounts greater than a value.
<code>max_date</code>	Maximum date
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

`fec_get_schedules_schedule_a_by_employer`
Get schedules schedule a by employer

Description

This endpoint provides itemized individual contributions received by a committee, aggregated by the contributor's employer name. If you are interested in our "is_individual" methodology, review the [methodology page](#). Unitemized individual contributions are not included.

Usage

```
fec_get_schedules_schedule_a_by_employer(
  employer,
  page,
  sort_nulls_last,
  cycle,
  sort_hide_null,
  committee_id,
  sort_null_only,
  per_page,
  sort,
  api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>employer</code>	Employer of contributor as reported on the committee's filing
<code>page</code>	For paginating through results, starting at page 1
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.

<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

`fec_get_schedules_schedule_a_by_occupation`
Get schedules schedule a by occupation

Description

This endpoint provides itemized individual contributions received by a committee, aggregated by the contributor's occupation. If you are interested in our "is_individual" methodology, review the [methodology page](#). Unitemized individual contributions are not included.

Usage

```
fec_get_schedules_schedule_a_by_occupation(
    occupation,
    page,
    sort_nulls_last,
    cycle,
    sort_hide_null,
    committee_id,
    sort_null_only,
    per_page,
    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>occupation</code>	Occupation of contributor as reported on the committee's filing
<code>page</code>	For paginating through results, starting at page 1

<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

`fec_get_schedules_schedule_a_by_size`
Get schedules schedule a by size

Description

This endpoint provides individual contributions received by a committee, aggregated by size: - \$200 and under - \$200.01 - \$499.99 - \$500 - \$999.99 - \$1000 - \$1999.99 - \$2000 +
 The \$200.00 and under category includes contributions of \$200 or less combined with unitemized individual contributions.

Usage

```
fec_get_schedules_schedule_a_by_size(
  sort_nulls_last,
  page,
  cycle,
  sort_hide_null,
  committee_id,
  size,
  sort_null_only,
  per_page,
  sort,
  api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>page</code>	For paginating through results, starting at page 1
<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>size</code>	The total all contributions in the following ranges: -0 \$200 and under -200 \$200.01 - \$499.00. Unitemized contributions are included in the 0 category.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

`fec_get_schedules_schedule_a_by_size_by_candidate`
Get schedules schedule a by size by candidate

Description

This endpoint provides itemized individual contributions received by a committee, aggregated by size of contribution and candidate. If you are interested in our “is_individual” methodology, review the [methodology page](#). Unitemized individual contributions are not included.

Usage

```
fec_get_schedules_schedule_a_by_size_by_candidate(
  candidate_id,
  sort_nulls_last,
  cycle,
  page,
  sort_hide_null,
```

```

    election_full,
    sort_null_only,
    per_page,
    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>page</code>	For paginating through results, starting at page 1
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>election_full</code>	<code>True</code> indicates that full election period of a candidate. <code>False</code> indicates that two year election cycle.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```

fec_get_schedules_schedule_a_by_state
    Get schedules schedule a by state

```

Description

This endpoint provides itemized individual contributions received by a committee, aggregated by the contributor's state. If you are interested in our "is_individual" methodology, review the [methodology page](#). Unitemized individual contributions are not included.

Usage

```

fec_get_schedules_schedule_a_by_state(
    hide_null,
    page,
    cycle,
    state,
    sort_hide_null,
    sort_nulls_last,
    committee_id,
    sort_null_only,
    per_page,
    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

<code>hide_null</code>	Exclude values with missing state
<code>page</code>	For paginating through results, starting at page 1
<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>state</code>	State of contributor
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_schedules_schedule_a_by_state_by_candidate
    Get schedules schedule a by state by candidate
```

Description

This endpoint provides itemized individual contributions received by a committee, aggregated by contributor's state and candidate. If you are interested in our "is_individual" methodology, review the [methodology page](#). Unitemized individual contributions are not included.

Usage

```
fec_get_schedules_schedule_a_by_state_by_candidate(
    candidate_id,
    sort_nulls_last,
    cycle,
    page,
    sort_hide_null,
    election_full,
    sort_null_only,
    per_page,
    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>page</code>	For paginating through results, starting at page 1
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>election_full</code>	<code>True</code> indicates that full election period of a candidate. <code>False</code> indicates that two year election cycle.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_schedules_schedule_a_by_state_by_candidate_totals
    Get schedules schedule a by state by candidate totals
```

Description

Itemized individual contributions aggregated by contributor's state, candidate, committee type and cycle. If you are interested in our "is_individual" methodology, review the [methodology page](#). Unitemized individual contributions are not included.

Usage

```
fec_get_schedules_schedule_a_by_state_by_candidate_totals(
    candidate_id,
    sort_nulls_last,
    cycle,
    page,
    sort_hide_null,
    election_full,
    sort_null_only,
    per_page,
    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>page</code>	For paginating through results, starting at page 1
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>election_full</code>	<code>True</code> indicates that full election period of a candidate. <code>False</code> indicates that two year election cycle.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null

<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

`fec_get_schedules_schedule_a_by_state_totals`

Get schedules schedule a by state totals

Description

This endpoint provides itemized individual contributions received by a committee, aggregated by contributor's state, committee type and cycle. If you are interested in our "is_individual" methodology, review the [methodology page](#). Unitemized individual contributions are not included.

Usage

```
fec_get_schedules_schedule_a_by_state_totals(
    committee_type,
    cycle,
    page,
    state,
    sort_hide_null,
    sort_nulls_last,
    sort_null_only,
    per_page,
    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

`committee_type`

The one-letter type code of the organization: - C communication cost - D delegate - E electioneering communication - H House - I independent expenditure filer (not a committee) - N PAC - nonqualified - O independent expenditure-only (super PACs) - P presidential - Q PAC - qualified - S Senate - U single candidate independent expenditure - V PAC with non-contribution account, nonqualified - W PAC with non-contribution account, qualified - X party, nonqualified - Y party, qualified - Z national party non-federal account - all All Committee Types - all_candidates All Candidate Committee Types (H, S, P) - all_pacs All PAC Committee Types (N, O, Q, V, W)

<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>page</code>	For paginating through results, starting at page 1
<code>state</code>	US state or territory
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

`fec_get_schedules_schedule_a_by_zip`
Get schedules schedule a by zip

Description

This endpoint provides itemized individual contributions received by a committee, aggregated by the contributor's ZIP code. If you are interested in our "is_individual" methodology, review the [methodology page](#). Unitemized individual contributions are not included.

Usage

```
fec_get_schedules_schedule_a_by_zip(
  page,
  cycle,
  zip,
  sort_hide_null,
  state,
  committee_id,
  sort_nulls_last,
  sort_null_only,
  per_page,
  sort,
  api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>page</code>	For paginating through results, starting at page 1
<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>zip</code>	Zip code of contributor
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>state</code>	State of contributor
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

`fec_get_schedules_schedule_a_efile`

Get schedules schedule a efile

Description

Efiling endpoints provide real-time campaign finance data received from electronic filers. Efiling endpoints only contain the most recent four months of data and don't contain the processed and coded data that you can find on other endpoints.

Usage

```
fec_get_schedules_schedule_a_efile(
  max_amount,
  contributor_occupation,
  max_image_number,
  sort_nulls_last,
  sort_hide_null,
  line_number,
```

```

    per_page,
    contributor_city,
    contributor_state,
    page,
    sort,
    committee_id,
    min_date,
    contributor_employer,
    contributor_name,
    min_image_number,
    sort_null_only,
    image_number,
    min_amount,
    max_date,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

max_amount Filter for all amounts less than a value.

contributor_occupation Occupation of contributor, filers need to make an effort to gather this information

max_image_number Maxium image number of the page where the schedule item is reported

sort_nulls_last Toggle that sorts null values last

sort_hide_null Hide null values on sorted column(s).

line_number Filter for form and line number using the following format: FORM-LINENUMBER. For example an argument such as F3X-16 would filter down to all entries from form F3X line number 16.

per_page The number of results returned per page. Defaults to 20.

contributor_city City of contributor

contributor_state State of contributor

page For paginating through results, starting at page 1

sort Provide a field to sort by. Use - for descending order.

committee_id A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.

min_date Minimum date

contributor_employer Employer of contributor, filers need to make an effort to gather this information

<code>contributor_name</code>	Name of contributor
<code>min_image_number</code>	Minium image number of the page where the schedule item is reported
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>image_number</code>	An unique identifier for each page where the electronic or paper filing is reported.
<code>min_amount</code>	Filter for all amounts greater than a value.
<code>max_date</code>	Maximum date
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

`fec_get_schedules_schedule_a_sub_id`

Get schedules schedule a sub id

Description

This description is for both `/schedules/schedule_a/` and `/schedules/schedule_a/{sub_id}/`.

This endpoint provides itemized receipts. Schedule A records describe itemized receipts, including contributions from individuals. If you are interested in contributions from an individual, use the `/schedules/schedule_a/` endpoint. For a more complete description of all Schedule A records visit [About receipts data](#). If you are interested in our "is_individual" methodology visit our [methodology page](#). The `/schedules/schedule_a/` endpoint is not paginated by page number. This endpoint uses keyset pagination to improve query performance and these indices are required to properly page through this large dataset. To request the next page, you should append the values found in the `last_indexes` object from pagination to the URL of your last request as additional parameters. For example, when sorting by `contribution_receipt_date`, you might receive a page of results with the two scenarios of following pagination information: case #1:

`pagination: { pages: 2152643, per_page: 20, count: 43052850, last_indexes: { last_index: "`

`
 case #2 (results which include contribution_receipt_date = NULL): pagination: { pages: 2152644, pe`

To fetch the next page of sorted results, append `last_index=230880619` and `last_contribution_receipt_date=2`

to the URL and when reaching `contribution_receipt_date=NULL`, append `last_index=230880639`

and `sort_null_only=True`. We strongly advise paging through these results using sort indices. The default sort is acending by `contribution_receipt_date` (`deprecated`, will be descending). If you do not page using sort indices, some transactions may be unintentionally filtered out. Calls to `/schedules/schedule_a/` may return many records. For large result sets, the record counts found in the pagination object are approximate; you will need to page through the records until no records are returned. To avoid throwing the "out of range" exception on the last page, one recommandation is to use total count and `per_page`

to control the traverse loop of results. The `/schedules/schedule_a/{sub_id}/` endpoint returns a single transaction, but it does include a pagination object class. Please ignore the information in that object class.

Usage

```
fec_get_schedules_schedule_a_sub_id(
    max_load_date,
    max_amount,
    max_image_number,
    contributor_occupation,
    recipient_committee_designation,
    sort_hide_null,
    is_individual,
    line_number,
    contributor_type,
    recipient_committee_type,
    per_page,
    contributor_zip,
    contributor_city,
    last_index,
    last_contribution_receipt_amount,
    contributor_id,
    recipient_committee_org_type,
    contributor_state,
    sort,
    two_year_transaction_period,
    min_date,
    committee_id,
    contributor_employer,
    min_load_date,
    last_contribution_receipt_date,
    min_image_number,
    contributor_name,
    sort_null_only,
    image_number,
    min_amount,
    max_date,
    sub_id,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

`max_load_date` Maximum load date

`max_amount` Filter for all amounts less than a value.

`max_image_number` Maximum image number of the page where the schedule item is reported

contributor_occupation
Occupation of contributor, filers need to make an effort to gather this information

recipient_committee_designation
The one-letter designation code of the organization: - A authorized by a candidate - J joint fundraising committee - P principal campaign committee of a candidate - U unauthorized - B lobbyist/registrant PAC - D leadership PAC

sort_hide_null
Hide null values on sorted column(s).

is_individual
Restrict to non-earmarked individual contributions where memo code is true. Filtering individuals is useful to make sure contributions are not double reported and in creating breakdowns of the amount of money coming from individuals.

line_number
Filter for form and line number using the following format: FORM-LINENUMBER. For example an argument such as F3X-16 would filter down to all entries from form F3X line number 16.

contributor_type
Filters individual or committee contributions based on line number

recipient_committee_type
The one-letter type code of the organization: - C communication cost - D delegate - E electioneering communication - H House - I independent expenditure filer (not a committee) - N PAC - nonqualified - O independent expenditure-only (super PACs) - P presidential - Q PAC - qualified - S Senate - U single candidate independent expenditure - V PAC with non-contribution account, nonqualified - W PAC with non-contribution account, qualified - X party, nonqualified - Y party, qualified - Z national party non-federal account

per_page
The number of results returned per page. Defaults to 20.

contributor_zip
Zip code of contributor

contributor_city
City of contributor

last_index
Index of last result from previous page

last_contribution_receipt_amount
When sorting by **contribution_receipt_amount**, this is populated with the **contribution_receipt_amount** of the last result. However, you will need to pass the index of that last result to **last_index** to get the next page.

contributor_id
The FEC identifier should be represented here if the contributor is registered with the FEC.

recipient_committee_org_type
The one-letter code for the kind for organization: - C corporation - L labor organization - M membership organization - T trade association - V cooperative - W corporation without capital stock

<code>contributor_state</code>	State of contributor
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>two_year_transaction_period</code>	This is a two-year period that is derived from the year a transaction took place in the Itemized Schedule A and Schedule B tables. In cases where we have the date of the transaction (<code>contribution_receipt_date</code> in <code>schedules/schedule_a</code> , <code>disbursement_date</code> in <code>schedules/schedule_b</code>) the <code>two_year_transaction_period</code> is named after the ending, even-numbered year. If we do not have the date of the transaction, we fall back to using the report year (<code>report_year</code> in both tables) instead, making the same cycle adjustment as necessary. If no transaction year is specified, the results default to the most current cycle.
<code>min_date</code>	Minimum date
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>contributor_employer</code>	Employer of contributor, filers need to make an effort to gather this information
<code>min_load_date</code>	Minimum load date
<code>last_contribution_receipt_date</code>	When sorting by <code>contribution_receipt_date</code> , this is populated with the <code>contribution_receipt_date</code> of the last result. However, you will need to pass the index of that last result to <code>last_index</code> to get the next page.
<code>min_image_number</code>	Minimum image number of the page where the schedule item is reported
<code>contributor_name</code>	Name of contributor
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>image_number</code>	An unique identifier for each page where the electronic or paper filing is reported.
<code>min_amount</code>	Filter for all amounts greater than a value.
<code>max_date</code>	Maximum date
<code>sub_id</code>	BKTODO: No description provided.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

 fec_get_schedules_schedule_b

Get schedules schedule b

Description

Schedule B filings describe itemized disbursements. This data explains how committees and other filers spend their money. These figures are reported as part of forms F3, F3X and F3P. The data is divided in two-year periods, called `two_year_transaction_period`, which is derived from the `report_year` submitted of the corresponding form. If no value is supplied, the results will default to the most recent two-year period that is named after the ending, even-numbered year. Due to the large quantity of Schedule B filings, this endpoint is not paginated by page number. Instead, you can request the next page of results by adding the values in the `last_indexes` object from `pagination` to the URL of your last request. For example, when sorting by `disbursement_date`, you might receive a page of results with the following pagination information: `pagination: { pages: 965191, per_page: 20, count: 19303814, last_index`. To fetch the next page of sorted results, append `last_index=230906248` and `last_disbursement_date=2014-07-0` to the URL. We strongly advise paging through these results by using the sort indices (defaults to sort by disbursement date, e.g. `last_disbursement_date`), otherwise some resources may be unintentionally filtered out. This resource uses keyset pagination to improve query performance and these indices are required to properly page through this large dataset. Note: because the Schedule B data includes many records, counts for large result sets are approximate; you will want to page through the records until no records are returned.

Usage

```
fec_get_schedules_schedule_b(
  disbursement_description,
  max_amount,
  max_image_number,
  image_number,
  sort_hide_null,
  last_disbursement_date,
  line_number,
  spender_committee_designation,
  last_disbursement_amount,
  per_page,
  last_index,
  spender_committee_type,
  sort,
  two_year_transaction_period,
  min_date,
  committee_id,
  disbursement_purpose_category,
  recipient_name,
  recipient_state,
```

```

    recipient_city,
    min_image_number,
    spender_committee_org_type,
    sort_null_only,
    recipient_committee_id,
    min_amount,
    max_date,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

disbursement_description Description of disbursement

max_amount Filter for all amounts less than a value.

max_image_number Maximum image number of the page where the schedule item is reported

image_number An unique identifier for each page where the electronic or paper filing is reported.

sort_hide_null Hide null values on sorted column(s).

last_disbursement_date When sorting by **disbursement_date**, this is populated with the **disbursement_date** of the last result. However, you will need to pass the index of that last result to **last_index** to get the next page.

line_number Filter for form and line number using the following format: **FORM-LINENUMBER**. For example an argument such as **F3X-16** would filter down to all entries from form **F3X** line number **16**.

spender_committee_designation The one-letter designation code of the organization: - A authorized by a candidate - J joint fundraising committee - P principal campaign committee of a candidate - U unauthorized - B lobbyist/registrant PAC - D leadership PAC

last_disbursement_amount When sorting by **disbursement_amount**, this is populated with the **disbursement_amount** of the last result. However, you will need to pass the index of that last result to **last_index** to get the next page.

per_page The number of results returned per page. Defaults to 20.

last_index Index of last result from previous page

spender_committee_type The one-letter type code of the organization: - C communication cost - D delegate - E electioneering communication - H House - I independent expenditure filer (not a committee) - N PAC - nonqualified - O independent expenditure-only (super PACs) - P presidential - Q PAC - qualified - S Senate - U single candidate independent expenditure - V PAC with non-contribution account, nonqualified - W PAC with non-contribution account, qualified - X party, nonqualified - Y party, qualified - Z national party non-federal account

<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>two_year_transaction_period</code>	This is a two-year period that is derived from the year a transaction took place in the Itemized Schedule A and Schedule B tables. In cases where we have the date of the transaction (<code>contribution_receipt_date</code> in <code>schedules/schedule_a</code> , <code>disbursement_date</code> in <code>schedules/schedule_b</code>) the <code>two_year_transaction_period</code> is named after the ending, even-numbered year. If we do not have the date of the transaction, we fall back to using the report year (<code>report_year</code> in both tables) instead, making the same cycle adjustment as necessary. If no transaction year is specified, the results default to the most current cycle.
<code>min_date</code>	Minimum date
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>disbursement_purpose_category</code>	Disbursement purpose category
<code>recipient_name</code>	Name of the entity receiving the disbursement
<code>recipient_state</code>	State of recipient
<code>recipient_city</code>	City of recipient
<code>min_image_number</code>	Minimum image number of the page where the schedule item is reported
<code>spender_committee_org_type</code>	The one-letter code for the kind for organization: - C corporation - L labor organization - M membership organization - T trade association - V cooperative - W corporation without capital stock
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>recipient_committee_id</code>	The FEC identifier should be represented here if the contributor is registered with the FEC.
<code>min_amount</code>	Filter for all amounts greater than a value.
<code>max_date</code>	Maximum date
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_schedules_schedule_b_by_purpose
    Get schedules schedule b by purpose
```

Description

Schedule B disbursements aggregated by disbursement purpose category. To avoid double counting, memoed items are not included. Purpose is a combination of transaction codes, category codes and disbursement description. Inspect the `disbursement_purpose` sql function within the migrations for more details.

Usage

```
fec_get_schedules_schedule_b_by_purpose(
    purpose,
    sort_nulls_last,
    page,
    cycle,
    sort_hide_null,
    committee_id,
    sort_null_only,
    per_page,
    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>purpose</code>	Disbursement purpose category
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>page</code>	For paginating through results, starting at page 1
<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_schedules_schedule_b_by_recipient
```

Get schedules schedule b by recipient

Description

Schedule B disbursements aggregated by recipient name. To avoid double counting, memoed items are not included.

Usage

```
fec_get_schedules_schedule_b_by_recipient(
  sort_nulls_last,
  page,
  cycle,
  sort_hide_null,
  committee_id,
  recipient_name,
  sort_null_only,
  per_page,
  sort,
  api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>page</code>	For paginating through results, starting at page 1
<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>recipient_name</code>	Name of the entity receiving the disbursement
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.

<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

`fec_get_schedules_schedule_b_by_recipient_id`
Get schedules schedule b by recipient id

Description

Schedule B disbursements aggregated by recipient committee ID, if applicable. To avoid double counting, memoed items are not included.

Usage

```
fec_get_schedules_schedule_b_by_recipient_id(
    sort_nulls_last,
    page,
    cycle,
    sort_hide_null,
    committee_id,
    sort_null_only,
    per_page,
    recipient_id,
    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>page</code>	For paginating through results, starting at page 1
<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null

<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>recipient_id</code>	The FEC identifier should be represented here if the entity receiving the disbursement is registered with the FEC.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

```
fec_get_schedules_schedule_b_efile
```

Get schedules schedule b efile

Description

Efiling endpoints provide real-time campaign finance data received from electronic filers. Efiling endpoints only contain the most recent four months of data and don't contain the processed and coded data that you can find on other endpoints.

Usage

```
fec_get_schedules_schedule_b_efile(
    disbursement_description,
    max_amount,
    page,
    sort_nulls_last,
    sort,
    sort_hide_null,
    committee_id,
    min_date,
    recipient_state,
    recipient_city,
    sort_null_only,
    per_page,
    image_number,
    min_amount,
    max_date,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>disbursement_description</code>	Description of disbursement
<code>max_amount</code>	Filter for all amounts less than a value.

<code>page</code>	For paginating through results, starting at page 1
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>min_date</code>	When sorting by <code>disbursement_date</code> , this is populated with the <code>disbursement_date</code> of the last result. However, you will need to pass the index of that last result to <code>last_index</code> to get the next page.
<code>recipient_state</code>	State of recipient
<code>recipient_city</code>	City of recipient
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>image_number</code>	An unique identifier for each page where the electronic or paper filing is reported.
<code>min_amount</code>	Filter for all amounts less than a value.
<code>max_date</code>	When sorting by <code>disbursement_date</code> , this is populated with the <code>disbursement_date</code> of the last result. However, you will need to pass the index of that last result to <code>last_index</code> to get the next page.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beeper

`fec_get_schedules_schedule_c`

Get schedules schedule c

Description

Schedule C shows all loans, endorsements and loan guarantees a committee receives or makes. The committee continues to report the loan until it is repaid.

Usage

```

fec_get_schedules_schedule_c(
    min_incurred_date,
    candidate_name,
    max_amount,
    max_image_number,
    sort_nulls_last,
    sort_hide_null,
    line_number,
    max_incurred_date,
    per_page,
    last_index,
    loan_source_name,
    page,
    sort,
    max_payment_to_date,
    min_payment_to_date,
    committee_id,
    min_image_number,
    sort_null_only,
    image_number,
    min_amount,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

<code>min_incurred_date</code>	Minimum incurred date
<code>candidate_name</code>	Name of candidate running for office
<code>max_amount</code>	Filter for all amounts less than a value.
<code>max_image_number</code>	Maximum image number of the page where the schedule item is reported
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>line_number</code>	Filter for form and line number using the following format: FORM-LINENUMBER. For example an argument such as F3X-16 would filter down to all entries from form F3X line number 16.
<code>max_incurred_date</code>	Maximum incurred date
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>last_index</code>	Index of last result from previous page
<code>loan_source_name</code>	Source of the loan (i.e., bank loan, brokerage account, credit card, home equity line of credit, other line of credit, or personal funds of the candidate)

<code>page</code>	For paginating through results, starting at page 1
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>max_payment_to_date</code>	Maximum payment to date
<code>min_payment_to_date</code>	Minimum payment to date
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>min_image_number</code>	Minimum image number of the page where the schedule item is reported
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>image_number</code>	An unique identifier for each page where the electronic or paper filing is reported.
<code>min_amount</code>	Filter for all amounts greater than a value.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_schedules_schedule_c_sub_id
    Get schedules schedule c sub id
```

Description

Schedule C shows all loans, endorsements and loan guarantees a committee receives or makes. The committee continues to report the loan until it is repaid.

Usage

```
fec_get_schedules_schedule_c_sub_id(
    sort_nulls_last,
    per_page,
    sort_null_only,
    sort_hide_null,
    sort,
    page,
    sub_id,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>page</code>	For paginating through results, starting at page 1
<code>sub_id</code>	BKTODO: No description provided.

BKTODO: Return descriptions are not yet implemented in beekeeper

`fec_get_schedules_schedule_d`
Get schedules schedule d

Description

Schedule D, it shows debts and obligations owed to or by the committee that are required to be disclosed.

Usage

```
fec_get_schedules_schedule_d(
  creditor_debtor_name,
  max_image_number,
  sort_nulls_last,
  max_amount_outstanding_beginning,
  sort_hide_null,
  min_payment_period,
  max_amount_incurred,
  nature_of_debt,
  per_page,
  max_amount_outstanding_close,
  candidate_id,
  page,
  min_date,
  committee_id,
  min_amount_outstanding_close,
```

```

    max_payment_period,
    min_image_number,
    min_amount_incurred,
    sort_null_only,
    image_number,
    sort,
    min_amount_outstanding_beginning,
    max_date,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

creditor_debtor_name
BKTODD: No description provided.

max_image_number
Maximum image number of the page where the schedule item is reported

sort_nulls_last
Toggle that sorts null values last

max_amount_outstanding_beginning
BKTODD: No description provided.

sort_hide_null
Hide null values on sorted column(s).

min_payment_period
BKTODD: No description provided.

max_amount_incurred
BKTODD: No description provided.

nature_of_debt
BKTODD: No description provided.

per_page
The number of results returned per page. Defaults to 20.

max_amount_outstanding_close
BKTODD: No description provided.

candidate_id
A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.

page
For paginating through results, starting at page 1

min_date
Minimum load date

committee_id
A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.

min_amount_outstanding_close
BKTODD: No description provided.

max_payment_period
BKTODD: No description provided.

min_image_number
Minimum image number of the page where the schedule item is reported

<code>min_amount_incurred</code>	BKTODO: No description provided.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>image_number</code>	An unique identifier for each page where the electronic or paper filing is reported.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>min_amount_outstanding_beginning</code>	BKTODO: No description provided.
<code>max_date</code>	Maximum load date
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

`fec_get_schedules_schedule_d_sub_id`
Get schedules schedule d sub id

Description

Schedule D, it shows debts and obligations owed to or by the committee that are required to be disclosed.

Usage

```
fec_get_schedules_schedule_d_sub_id(
    sort_nulls_last,
    per_page,
    sort_null_only,
    sort_hide_null,
    sort,
    page,
    sub_id,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null

```

    sort_hide_null,
    payee_name,
    q_spender,
    per_page,
    last_index,
    min_dissemination_date,
    candidate_office_state,
    filing_form,
    sort_null_only,
    max_amount,
    max_image_number,
    min_filing_date,
    cycle,
    sort_nulls_last,
    support_oppose_indicator,
    candidate_office,
    is_notice,
    line_number,
    last_expenditure_amount,
    last_expenditure_date,
    candidate_id,
    last_office_total_ytd,
    last_support_oppose_indicator,
    min_date,
    candidate_party,
    committee_id,
    min_image_number,
    max_filing_date,
    candidate_office_district,
    min_amount,
    image_number,
    sort,
    max_date,
    most_recent,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

<code>max_dissemination_date</code>	Selects all items distributed by this committee before this date
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>payee_name</code>	Name of the entity that received the payment.
<code>q_spender</code>	Keyword search for spender name or ID
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>last_index</code>	Index of last result from previous page

<code>min_dissemination_date</code>	Selects all items distributed by this committee after this date
<code>candidate_office_state</code>	US state or territory
<code>filing_form</code>	The form where the underlying data comes from, for example, Form 1 would appear as F1: - F1 Statement of Organization - F1M Notification of Multicandidate Status - F2 Statement of Candidacy - F3 Report of Receipts and Disbursements for an Authorized Committee - F3P Report of Receipts and Disbursements by an Authorized Committee of a Candidate for The Office of President or Vice President - F3L Report of Contributions Bundled by Lobbyists/Registrants and Lobbyist/Registrant PACs - F3X Report of Receipts and Disbursements for other than an Authorized Committee - F4 Report of Receipts and Disbursements for a Committee or Organization Supporting a Nomination Convention - F5 Report of Independent Expenditures Made and Contributions Received - F6 48 Hour Notice of Contributions/Loans Received - F7 Report of Communication Costs by Corporations and Membership Organizations - F8 Debt Settlement Plan - F9 24 Hour Notice of Disbursements for Electioneering Communications - F13 Report of Donations Accepted for Inaugural Committee - F99 Miscellaneous Text - FRQ Request for Additional Information
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>max_amount</code>	Filter for all amounts less than a value.
<code>max_image_number</code>	Maxium image number of the page where the schedule item is reported
<code>min_filing_date</code>	Selects all filings received after this date
<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>support_oppose_indicator</code>	Explains if the money was spent in order to support or oppose a candidate or candidates. (Coded S or O for support or oppose.) This indicator applies to independent expenditures and communication costs.
<code>candidate_office</code>	Federal office candidate runs for: H, S or P
<code>is_notice</code>	Record filed as 24- or 48-hour notice.
<code>line_number</code>	Filter for form and line number using the following format: FORM-LINENUMBER. For example an argument such as F3X-16 would filter down to all entries from form F3X line number 16.
<code>last_expenditure_amount</code>	When sorting by <code>expenditure_amount</code> , this is populated with the <code>expenditure_amount</code> of the last result. However, you will need to pass the index of that last result to <code>last_index</code> to get the next page.

<code>last_expenditure_date</code>	When sorting by <code>expenditure_date</code> , this is populated with the <code>expenditure_date</code> of the last result. However, you will need to pass the index of that last result to <code>last_index</code> to get the next page.
<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>last_office_total_ytd</code>	When sorting by <code>office_total_ytd</code> , this is populated with the <code>office_total_ytd</code> of the last result. However, you will need to pass the index of that last result to <code>last_index</code> to get the next page.
<code>last_support_oppose_indicator</code>	When sorting by <code>support_oppose_indicator</code> , this is populated with the <code>support_oppose_indicator</code> of the last result. However, you will need to pass the index of that last result to <code>last_index</code> to get the next page.
<code>min_date</code>	Minimum date
<code>candidate_party</code>	Three-letter code for the party affiliated with a candidate or committee. For example, DEM for Democratic Party and REP for Republican Party.
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>min_image_number</code>	Minimum image number of the page where the schedule item is reported
<code>max_filing_date</code>	Selects all filings received before this date
<code>candidate_office_district</code>	Two-digit US House district of the office the candidate is running for. Presidential, Senate and House at-large candidates will have District 00.
<code>min_amount</code>	Filter for all amounts greater than a value.
<code>image_number</code>	An unique identifier for each page where the electronic or paper filing is reported.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>max_date</code>	Maximum date
<code>most_recent</code>	The report associated with the transaction is either new or is the most-recently filed amendment. Undetermined version (<code>null</code>) is always included.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_schedules_schedule_e_by_candidate
    Get schedules schedule e by candidate
```

Description

Schedule E receipts aggregated by recipient candidate. To avoid double counting, memoed items are not included.

Usage

```
fec_get_schedules_schedule_e_by_candidate(
    office,
    candidate_id,
    cycle,
    district,
    state,
    page,
    support_oppose,
    election_full,
    committee_id,
    sort_hide_null,
    sort_nulls_last,
    sort_null_only,
    per_page,
    sort,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>office</code>	Federal office candidate runs for: H, S or P
<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>district</code>	Two-digit US House district of the office the candidate is running for. Presidential, Senate and House at-large candidates will have District 00.
<code>state</code>	US state or territory where a candidate runs for office
<code>page</code>	For paginating through results, starting at page 1
<code>support_oppose</code>	Support or opposition
<code>election_full</code>	True indicates that full election period of a candidate. False indicates that two year election cycle.

<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

`fec_get_schedules_schedule_e_efile`

Get schedules schedule e efile

Description

Efiling endpoints provide real-time campaign finance data received from electronic filers. Efiling endpoints only contain the most recent four months of data and don't contain the processed and coded data that you can find on other endpoints.

Usage

```
fec_get_schedules_schedule_e_efile(
  spender_name,
  min_expenditure_date,
  sort_nulls_last,
  max_dissemination_date,
  support_oppose_indicator,
  sort_hide_null,
  candidate_office,
  is_notice,
  payee_name,
  per_page,
  candidate_search,
  max_expenditure_amount,
  min_dissemination_date,
  min_filed_date,
  candidate_id,
```

```

    candidate_office_state,
    max_filed_date,
    page,
    min_expenditure_amount,
    committee_id,
    candidate_party,
    max_expenditure_date,
    filing_form,
    sort_null_only,
    candidate_office_district,
    image_number,
    sort,
    most_recent,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

spender_name The name of the committee. If a committee changes its name, the most recent name will be shown. Committee names are not unique. Use committee_id for looking up records.

min_expenditure_date Selects all items expended by this committee after this date

sort_nulls_last Toggle that sorts null values last

max_dissemination_date Selects all items distributed by this committee before this date

support_oppose_indicator Explains if the money was spent in order to support or oppose a candidate or candidates. (Coded S or O for support or oppose.) This indicator applies to independent expenditures and communication costs.

sort_hide_null Hide null values on sorted column(s).

candidate_office Federal office candidate runs for: H, S or P

is_notice Record filed as 24- or 48-hour notice.

payee_name Name of the entity that received the payment.

per_page The number of results returned per page. Defaults to 20.

candidate_search Search for candidates by candidate id or candidate first or last name

max_expenditure_amount Selects all items expended by this committee less than this amount

min_dissemination_date Selects all items distributed by this committee after this date

min_filed_date Timestamp of electronic or paper record that FEC received

candidate_id	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
candidate_office_state	US state or territory where a candidate runs for office
max_filed_date	Timestamp of electronic or paper record that FEC received
page	For paginating through results, starting at page 1
min_expenditure_amount	Selects all items expended by this committee greater than this amount
committee_id	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
candidate_party	Three-letter code for the party affiliated with a candidate or committee. For example, DEM for Democratic Party and REP for Republican Party.
max_expenditure_date	Selects all items expended by this committee before this date
filing_form	The form where the underlying data comes from, for example, Form 1 would appear as F1: - F1 Statement of Organization - F1M Notification of Multicandidate Status - F2 Statement of Candidacy - F3 Report of Receipts and Disbursements for an Authorized Committee - F3P Report of Receipts and Disbursements by an Authorized Committee of a Candidate for The Office of President or Vice President - F3L Report of Contributions Bundled by Lobbyists/Registrants and Lobbyist/Registrant PACs - F3X Report of Receipts and Disbursements for other than an Authorized Committee - F4 Report of Receipts and Disbursements for a Committee or Organization Supporting a Nomination Convention - F5 Report of Independent Expenditures Made and Contributions Received - F6 48 Hour Notice of Contributions/Loans Received - F7 Report of Communication Costs by Corporations and Membership Organizations - F8 Debt Settlement Plan - F9 24 Hour Notice of Disbursements for Electioneering Communications - F13 Report of Donations Accepted for Inaugural Committee - F99 Miscellaneous Text - FRQ Request for Additional Information
sort_null_only	Toggle that filters out all rows having sort column that is non-null
candidate_office_district	Two-digit US House district of the office the candidate is running for. Presidential, Senate and House at-large candidates will have District 00.
image_number	An unique identifier for each page where the electronic or paper filing is reported.
sort	Provide a field to sort by. Use - for descending order.
most_recent	The report associated with the transaction is either new or is the most-recently filed amendment. Undetermined version (null) is always included.

api_key An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

fec_get_schedules_schedule_e_totals_by_candidate
Get schedules schedule e totals by candidate

Description

Total independent expenditure on supported or opposed candidates by cycle or candidate election year.

Usage

```
fec_get_schedules_schedule_e_totals_by_candidate(
  candidate_id,
  sort_nulls_last,
  page,
  cycle,
  sort_hide_null,
  election_full,
  sort_null_only,
  per_page,
  sort,
  api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

candidate_id A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.

sort_nulls_last Toggle that sorts null values last

page For paginating through results, starting at page 1

cycle Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.

sort_hide_null Hide null values on sorted column(s).

election_full True indicates that full election period of a candidate. False indicates that two year election cycle.

<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_schedules_schedule_f
    Get schedules schedule f
```

Description

Schedule F, it shows all special expenditures a national or state party committee makes in connection with the general election campaigns of federal candidates. These coordinated party expenditures do not count against the contribution limits but are subject to other limits, these limits are detailed in Chapter 7 of the FEC Campaign Guide for Political Party Committees.

Usage

```
fec_get_schedules_schedule_f(
    max_amount,
    max_image_number,
    cycle,
    sort_nulls_last,
    sort_hide_null,
    line_number,
    payee_name,
    per_page,
    candidate_id,
    page,
    min_date,
    committee_id,
    min_amount,
    min_image_number,
    sort_null_only,
    image_number,
    sort,
    max_date,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>max_amount</code>	Filter for all amounts less than a value.
<code>max_image_number</code>	Maxium image number of the page where the schedule item is reported
<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>line_number</code>	Filter for form and line number using the following format: <code>FORM-LINENUMBER</code> . For example an argument such as <code>F3X-16</code> would filter down to all entries from form <code>F3X</code> line number <code>16</code> .
<code>payee_name</code>	BKTODO: No description provided.
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>candidate_id</code>	A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office.
<code>page</code>	For paginating through results, starting at page 1
<code>min_date</code>	Minimum date
<code>committee_id</code>	A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.
<code>min_amount</code>	Filter for all amounts greater than a value.
<code>min_image_number</code>	Minium image number of the page where the schedule item is reported
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>image_number</code>	An unique identifier for each page where the electronic or paper filing is reported.
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>max_date</code>	Maximum date
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_schedules_schedule_f_sub_id
    Get schedules schedule f sub id
```

Description

Schedule F, it shows all special expenditures a national or state party committee makes in connection with the general election campaigns of federal candidates. These coordinated party expenditures do not count against the contribution limits but are subject to other limits, these limits are detailed in Chapter 7 of the FEC Campaign Guide for Political Party Committees.

Usage

```
fec_get_schedules_schedule_f_sub_id(
    per_page,
    page,
    sub_id,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>page</code>	For paginating through results, starting at page 1
<code>sub_id</code>	BKTODO: No description provided.
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_state_election_office
    Get state election office
```

Description

State laws and procedures govern elections for state or local offices as well as how candidates appear on election ballots. Contact the appropriate state election office for more information.

Usage

```
fec_get_state_election_office(
  sort_null_only,
  sort_nulls_last,
  per_page,
  state,
  sort_hide_null,
  sort,
  page,
  api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>state</code>	Enter a state (Ex: AK, TX, VA etc..) to find the local election offices contact information.
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>page</code>	For paginating through results, starting at page 1
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_totals_by_entity
  Get totals by entity
```

Description

Provides cumulative receipt totals by entity type, over a two year cycle. Totals are adjusted to avoid double counting. This is [the sql](#) that creates these calculations.

Usage

```
fec_get_totals_by_entity(
  cycle,
  sort_nulls_last,
  per_page,
  sort_null_only,
  sort_hide_null,
  sort,
  page,
  api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)
```

Arguments

<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>sort_nulls_last</code>	Toggle that sorts null values last
<code>per_page</code>	The number of results returned per page. Defaults to 20.
<code>sort_null_only</code>	Toggle that filters out all rows having sort column that is non-null
<code>sort_hide_null</code>	Hide null values on sorted column(s).
<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>page</code>	For paginating through results, starting at page 1
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

BKTODO: Return descriptions are not yet implemented in beekeeper

```
fec_get_totals_entity_type
  Get totals entity type
```

Description

This endpoint provides information about a committee's Form 3, Form 3X, or Form 3P financial reports, which are aggregated by two-year period. We refer to two-year periods as a *cycle*. The cycle is named after the even-numbered year and includes the year before it. To obtain totals from 2013 and 2014, you would use 2014. In odd-numbered years, the current cycle is the next year — for example, in 2015, the current cycle is 2016. For presidential and Senate candidates, multiple two-year cycles exist between elections.

Usage

```

fec_get_totals_entity_type(
    max_first_f1_date,
    min_receipts,
    cycle,
    filing_frequency,
    max_receipts,
    sort_hide_null,
    sort_nulls_last,
    min_last_debts_owed_by_committee,
    max_last_cash_on_hand_end_period,
    treasurer_name,
    sponsor_candidate_id,
    per_page,
    max_disbursements,
    committee_state,
    committee_type,
    page,
    max_last_debts_owed_by_committee,
    committee_id,
    committee_designation,
    sort_null_only,
    min_first_f1_date,
    organization_type,
    sort,
    min_disbursements,
    min_last_cash_on_hand_end_period,
    entity_type,
    api_key = Sys.getenv("FEC_API_KEY", unset = "DEMO_KEY")
)

```

Arguments

<code>max_first_f1_date</code>	Filter for committees whose first Form 1 was received on or before this date.
<code>min_receipts</code>	Filter for all amounts greater than a value.
<code>cycle</code>	Filter records to only those that were applicable to a given two-year period. The cycle begins with an odd year and is named for its ending, even year.
<code>filing_frequency</code>	The one-letter code of the filing frequency: - A Administratively terminated - D Debt - M Monthly filer - Q Quarterly filer - T Terminated - W Waived
<code>max_receipts</code>	Filter for all amounts less than a value.
<code>sort_hide_null</code>	Hide null values on sorted column(s).

sort_nulls_last
Toggle that sorts null values last

min_last_debts_owed_by_committee
Filter for all amounts greater than a value.

max_last_cash_on_hand_end_period
Filter for all amounts less than a value.

treasurer_name
Name of the Committee's treasurer. If multiple treasurers for the committee, the most recent treasurer will be shown.

sponsor_candidate_id
A unique identifier assigned to each candidate registered with the FEC. If a person runs for several offices, that person will have separate candidate IDs for each office. This is a filter for Leadership PAC sponsor.

per_page
The number of results returned per page. Defaults to 20.

max_disbursements
Filter for all amounts less than a value.

committee_state
US state or territory

committee_type
The one-letter type code of the organization: - C communication cost - D delegate - E electioneering communication - H House - I independent expenditure filer (not a committee) - N PAC - nonqualified - O independent expenditure-only (super PACs) - P presidential - Q PAC - qualified - S Senate - U single candidate independent expenditure - V PAC with non-contribution account, nonqualified - W PAC with non-contribution account, qualified - X party, nonqualified - Y party, qualified - Z national party non-federal account

page
For paginating through results, starting at page 1

max_last_debts_owed_by_committee
Filter for all amounts less than a value.

committee_id
A unique identifier assigned to each committee or filer registered with the FEC. In general committee id's begin with the letter C which is followed by eight digits.

committee_designation
The one-letter designation code of the organization: - A authorized by a candidate - J joint fundraising committee - P principal campaign committee of a candidate - U unauthorized - B lobbyist/registrant PAC - D leadership PAC

sort_null_only
Toggle that filters out all rows having sort column that is non-null

min_first_f1_date
Filter for committees whose first Form 1 was received on or after this date.

organization_type
The one-letter code for the kind for organization: - C corporation - L labor organization - M membership organization - T trade association - V cooperative - W corporation without capital stock

<code>sort</code>	Provide a field to sort by. Use - for descending order.
<code>min_disbursements</code>	Filter for all amounts greater than a value.
<code>min_last_cash_on_hand_end_period</code>	Filter for all amounts greater than a value.
<code>entity_type</code>	Committee groupings based on FEC filing form. Choose one of: <code>presidential</code> , <code>pac</code> , <code>party</code> , <code>pac-party</code> , <code>house-senate</code> , or <code>ie-only</code>
<code>api_key</code>	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.
