trello_call_api   *Call the Trello API*

Description

Generate a request to an Trello endpoint.

Usage

```
trello_call_api(
  path,
  query = NULL,
  body = NULL,
  method = NULL,
  key = Sys.getenv("TRELLO_KEY"),
  token = Sys.getenv("TRELLO_TOKEN")
)
```

Arguments

path	The route to an API endpoint. Optionally, a list with the path plus variables to `glue::glue()` into the path.
query	An optional list of parameters to pass in the query portion of the request.
body	An object to use as the body of the request. If any component of the body is a path, pass it through `fs::path()` or otherwise give it the class "fs_path" to indicate that it is a path.
method	If the method is something other than GET or POST, supply it. Case is ignored.
key	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.
token	An API key provided by the API provider. This key is not clearly documented in the API description. Check the API documentation for details.

Value

The response from the endpoint.
